ABSTRACT

This report presents the results of the National Science Foundation's (NSF) Survey of Scientific Activities at Universities and Colleges, 1971, dealing exclusively with the employment of scientific and engineering personnel and the financing of scientific activities in U.S. institutions of higher education. The survey was conducted by mail questionnaires sent to 2,198 universities and colleges that maintained science and engineering programs. Usable questionnaires were received from three-fourths of these institutions. The survey obtained employment figures for scientists and engineers, graduate students receiving stipends for part-time services as scientists, and science technicians, as of mid-January 1971. Current and capital expenditures for research, development, and instruction in the sciences and engineering were collected for academic year 1969-70. The statistics were analyzed by function, level of educational attainment, type of institution, field of science, geographic area, source of funds, cost item and type of research and development, as appropriate. Appendices include related material. (Author/MJM)

This report presents the results of NSF's Survey of Scientific Activities at Universities and Colleges, 1971, dealing exclusively with the employment of scientific and engineering personnel and the financing of scientific activities in U. S. institutions of higher education. It is the fourth in a series of biennial surveys instituted in 1964. The survey obtained employment figures for scientists and engineers, graduate students receiving stipends for part-time services as scientists, and science technicians, as of mid-January 1971. Current and capital expenditures for research, development, and instruction in the sciences and engineering were collected for academic year 1969-70. The statistics were analyzed by function, level of education attainment, type of institution, field of science, geographic area, source of funds, cost item, and type of research and development, as appropriate. Separate data is available for Federally Funded Research and Development Centers, administered by universities and colleges, and medical schools. The survey was conducted by mail questionnaires sent to 2,196 universities and colleges that maintained science and engineering programs. Usable questionnaires were received from three-fourths of these institutions. Figures shown in the report, however, represent universe totals, since they include estimates for all nonrespondents.

general notes

- Statistics shown in this report may not add to totals or subtotals because of rounding.
- All percentage changes in trend statistics represent compound annual rates.
- Financial data relate to the academic year, while employment figures relate to January of the designated year. For example, 1970 expenditures represent academic year 1969-70 and 1971 manpower data represent employment levels as of January 1971.
- Data for current R&D expenditures include estimates for departmental research and for other R&D costs for which most universities and colleges do not maintain separate records.

FOREWORD

There has been much in the news of recent years regarding the financial plight in the Nation's universities and colleges. The rapid expansion in academic science programs that occurred throughout the early and mid-sixties established continuing requirements for financing expensive science research and instruction operations. There then followed a period in which academic institutions experienced a leveling off, and in some cases a decline, in support from their traditional sources of revenue, both governmental and private. Although recent increases in the level of Federal and private support are looked upon as hopeful signs of a reversal in this trend, many university administrators and public officials are advocating ways of stabilizing the flow of funds, particularly Federal funds, to institutions of higher education in an attempt to prevent large and unpredictable future fluctuations.

This study is an integral part of the NSF continuing program of periodic surveys designed to produce information on the scope and character of the Nation's investment in science and technology. Under this program all major sectors of the U.S. economy are covered, including industry, government, and independent nonprofit organizations. The present report gives special attention to trends in the utilization of resources by field of science, type of institution, and source of financing.

The National Science Foundation extends its appreciation to the officials of universities and colleges who provided the information upon which this report is based.

acknowledgments

This report was prepared in the Division of Science Resources Studies under the guidance of Kenneth Sanow, Head, Statistical Surveys and Reports Section. The survey was conducted under the direction of the late Joseph H. Schuster, Study Director, Universities and Nonprofit Institutions Studies Group. The report was prepared under the direction of William L. Stewart, Acting Study Director. Ronald S. Biggar, Jr., carried out major responsibilities during all phases of the survey and in the preparation of the report. James G. Huckenpahler contributed to all aspects of the survey, including writing certain sections of the report. Joan Staudte provided the statistical assistance required for the survey. Assistance in compiling the mailing list and other aspects of the survey by officials of the U.S. Office of Education is gratefully acknowledged.

HIGHLIGHTS

- Universities and colleges are experiencing significant shifts in the proportion of scientists and engineers primarily engaged in R&D performance in contrast to those employed as teachers (page 1).

- In full-time-equivalent (FTE) terms, the employment of scientists in research and development declined 1 percent per year between 1969 and 1971 compared with an annual growth of 6 percent from 1965-69 (page 1).

- In contrast, the growth rate of teaching staff remained relatively constant at about 10 percent per year throughout the period; consequently, R&D scientists dropped from 26 percent of total staff in 1965 to 20 percent in 1971 (page 1).

- In FTE terms, graduate student employment increased 3 percent per year from 1969-71 compared with a 10-percent annual growth during 1965-69. The increase of graduate students working on R&D projects fell from an annual rate of 8 percent in the 1965-69 period to 2 percent per year from 1969-71 (page 5).

- Compared with a 9-percent annual growth from 1965 to 1969, the number of technicians employed by universities and colleges actually declined since 1969. The curtailment of technician employment represents an effort by many universities to trim staff and programs for budgetary purposes (page 7).

- Science expenditures in 1970 totaled $7.9 billion; this increase of 6 percent per year (1 percent in constant dollars)[1] over the $7.0 billion total in 1968 compares with a 15-percent annual growth for 1964-68 (page 8).

- Federal financing of research and dev
increase per year (a 2-percent annu
1968-70 period. Recent data, howev
to universities and colleges will show
for fiscal years 1972 and 1973 (page

annual percent growth from 1953
however, growth has slowed to 3 pe

[1] Constant dollar data shown throughout this report are based on computations using the GNP implicit price deflator; the data represent estimates of price changes in science and engineering activities rather than precise indicators.

- Federal financing of research and development leveled off to a 3-percent increase per year (a 2-percent annual decline in constant dollars) in the 1968-70 period. Recent data, however, indicate that Federal obligations to universities and colleges will show a somewhat higher rate of increase for fiscal years 1972 and 1973 (page 10).

- Private institutions, more severely affected by the slowdown in R&D support than public institutions, increased science expenditures by 3 percent per year from 1968-70, while public institutions maintained a 9-percent annual rate. Both types had averaged an annual growth of at least 14 percent in the 1964-68 period (page 12).

- Capital expenditures for scientific and engineering facilities and equipment dropped 5 percent per year during 1968-70, after an extraordinarily sharp rise (19 percent per year) between 1964 and 1968. Largely responsible for the shift were budgetary reductions in facilities-granting programs of Federal agencies; however, due to the tightening economic situation, capital expenditures funded from other sources also declined by 4 percent a year (page 16).

- For the first time since the inception of the current survey series, medical schools allotted less than one-half their science budget to current R&D expenditures, reflecting the greater instructional outlays required by increasing enrollments (page 65).

- Nearly all of the 11,300 scientists and engineers employed in university-administered FFRDC's in 1971 worked full time on R&D projects - this number has remained virtually the same since 1965 (page 19).

- R&D expenditures in university-administered FFRDC's totaled $737 million, in 1970, six times the $121 million reported in 1953. The average annual percent growth from 1953 to 1970 was 11 percent. Since 1964, however, growth has slowed to 3 percent per year (page 21).

INTRODUCTION

This report presents the results of the National Science Foundation's Survey of Scientific Activities at Universities and Colleges, 1971, dealing exclusively with the employment of scientific and engineering personnel and the financing of scientific activities in U.S. institutions of higher education. It is the fourth in a series of biennial surveys instituted in 1964.[1] Earlier surveys, conducted in 1954, 1958, and 1961 were more limited in scope than the current series. The 1954 survey, for example, collected information on the scientific activities of only 190 "large" institutions, while the 1961 survey requested only manpower data.

The survey obtained employment figures for scientists and engineers, graduate students receiving stipends for part-time services as scientists or engineers, and scientific and engineering technicians, as of mid-January 1971, and current and capital expenditures for research, development, and instruction in the sciences and engineering during the academic year 1969-70. Data for universities and colleges are presented in part I of the report, while data relating to university-administered Federally Funded Research and Development Centers (FFRDC's) are presented in part II. The mutual exclusivity of the figures in the two parts should be kept in mind when statistics shown in this report for universities and colleges (part I) are compared with other statistics, such as those published by the U.S. Office of Education, which reflect overall totals for higher education, including university-administered FFRDC's.

ures were included in the report on the 1969 survey.

Colleges, and Selected Nonprofit Institutions[2] because financial figures published here represent actual expenditures of the educational institutions, while those for Federal agencies represent obligations to the institutions. The distinction between *obligations* (i.e., funds allocated by the source) and *expenditures* (i.e., funds actually spent by the performer) in any given year should be kept in mind when figures presented in this report are compared with statistics based upon the obligations of Federal agencies.

The major conceptual difference between this report and the previously published reports in the series is that for the first time nonseparately budgeted R&D expenditures (primarily departmental research) are included in the heading "Current R&D Expenditures" rather than "Current Expenditures for Instruction and Departmental Research." The effect of this change is to augment the R&D expenditure totals by about $320 million in 1964, $370 million in 1966, and $450 million in 1968. It is believed that this shift reflects more accurately the apportionment of current funding emphasis between research and development on the one hand, and instruction on the other.

The manpower figures presented in this report incorporate a refinement in the definition of "scientists and engineers" to exclude physicians primarily engaged in patient care. This adjustment has led to a reduction in the figure for "total scientists and engineers employed" amounting to about 7,000 in January 1965, and about 5,000 in 1967 and 1969.

Details regarding the scope, coverage, methods of estimating and limitations of the survey are presented in the technical notes in appendix A. Also reproduced in the appendixes are the consolidated questionnaires summarizing survey data for selected categories of institutions covered in the survey, as follows: Appendix B, 2,198 universities and colleges, including all medical schools; appendix C, 105 medical schools; and appendix D, 35 university-administered FFRDC's. Survey instructions are reproduced in appendix E.

Part I

UNIVERSITIES AND COLLEGES

Section 1. SCIENTIFIC AND TECHNICAL PERSONNEL

This section of the report analyzes the principal employment characteristics of scientific personnel engaged in teaching, research, and other scientific and engineering activities in the 2,198 universities and colleges with such programs in January 1971. Excluded from this section and elsewhere in part I are employment and financial characteristics of university-administered FFRDC's, which are shown separately in part II of this report.

Employment statistics reported here are analyzed by employment status, function, disciplinary field, type of institution (highest degree granted in the sciences and engineering), level of educational attainment (highest earned degree of the scientist or engineer), and geographic area. To the extent possible, statistics for 1971 are compared with data for earlier years.[1]

Rates of change in FTE[a] scientists and engineers engaged in research and development in universities and colleges and all other sectors of the economy, 1965-69 and 1969-71

[1] Figures on the employment of scientists and engineers shown in this report for years prior to 1971 represent slight downward revisions (about 3 percent in 1969) from those shown in National Science Foundation, *Resources for Scientific Activities at Universities and Colleges, 1969* (NSF 70-16) (Washington, D.C., 20402, Supt. of Documents, U.S. Government Printing Office, 1971), p.2. The revisions reflect principally the exclusion of M.D.'s and other health-professional personnel primarily engaged in patient care and other clinical activities in university-operated hospitals from scientific employment classifications.

Scientists and Engineers

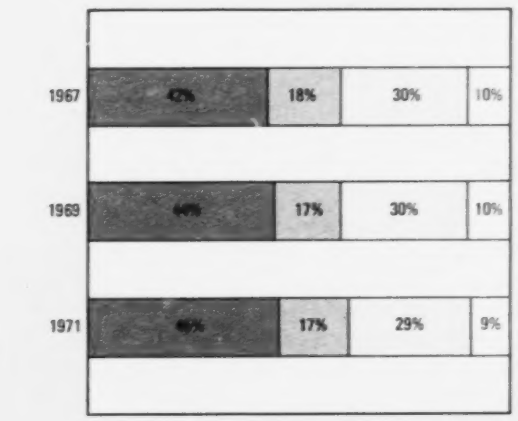
Universities and colleges employed 274,000 scientists and engineers in 1971,[2] an increase of 5 percent per year over the 246,000 employed in 1969. This represents a reduced rate of increase from the 8-percent annual growth between 1965 and 1969. Part-time faculty and other professional staff continued to account for approximately one-fifth the total number of scientists and engineers. A large proportion of these professionals are utilized in evening programs in institutions located in large metropolitan areas. Another sizable group are health-professionals employed in medical schools and university-owned hospitals.

In terms of the full-time-equivalent (FTE) number of R&D scientists and engineers, however, universities and colleges reported a small decline, less than 1 percent, during the 1969-71 period, a marked change from the 6-percent average annual growth that occurred during the earlier 4 years. The latter period, 1969-71, was one of decline in the total number of R&D scientists and engineers in all sectors, of which universities and colleges account for about one-tenth. The decline in the academic sector was well below the rate of the other major sectors of the economy.

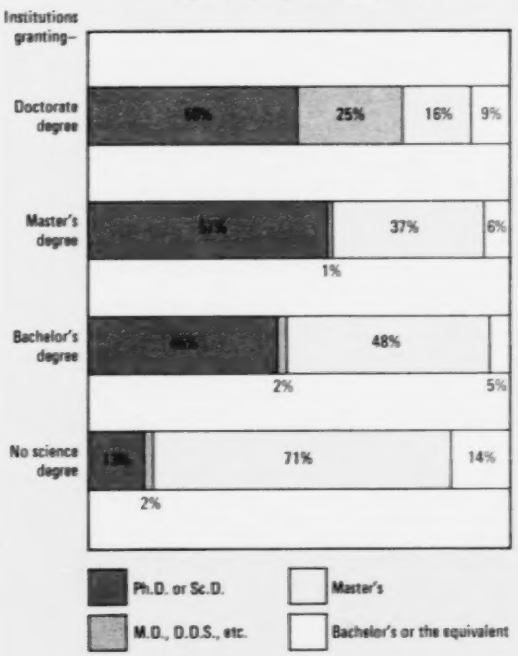
Important shifts in the functional pattern of scientific and engineering employment are developing as a result of the reduced rate of growth in Federal R&D support to universities and colleges. Consequently, the FTE's in research and development dropped from 26 percent of total employment in 1965 to 20 percent in 1971. In contrast, FTE scientists and engineers in teaching increased 9 percent per year during 1969-71, nearly matching the 10-percent annual growth during the 1965-69 period.

[2] Excludes graduate students working as scientists and engineers. These students are covered separately in a later section.

Educational attainment of scientists and engineers employed in universities and colleges



In institutions grouped by highest science or engineering degree awarded, 1971



SOURCE: National Science Foundation

Educational Attainment

The attainment of the doctorate degree is increasingly important for employment within the academic sector. Since 1965 the proportion of employed scientists and engineers with doctorate degrees has further increased while the proportion of master's and bachelor's degree holders have declined.

In 1971, nearly two-thirds of all scientists and engineers employed at universities and colleges had a Ph.D. or a health-professional doctorate. This high proportion with doctorate degrees is attributable to the fact that most doctorate-granting institutions require an earned doctorate as a prerequisite for acquiring tenure faculty rank. Consequently, three-fourths of all the scientists and engineers in doctorate-granting institutions hold a doctorate degree, while in nonscience-degree-granting institutions,[3] doctorate holders account for only 15 percent of the total.

Field of Employment

Each field of employment has maintained a relatively constant share of the total throughout the 1965-71 period. The most significant adjustment occurred in the social sciences, growing from 18 percent of the total in 1965 to 22 percent in 1971. Employment in the life sciences has increased steadily, although at a moderate 7-percent annual rate from 1965 to 1971. Other areas such as mathematics and psychology experienced rapid growth from 1965-69, and rather moderate growth during the 1969-71 period.

[3]Here and elsewhere in this report, the terms "no-science-degree" refers to institutions that offer no degrees in the sciences and engineering at the baccalaureate or higher level.

Educational Attainment

The attainment of the doctorate degree is increasingly important for employment within the academic sector. Since 1965 the proportion of employed scientists and engineers with doctorate degrees has further increased while the proportion of master's and bachelor's degree holders have declined.

In 1971, nearly two-thirds of all scientists and engineers employed at universities and colleges had a Ph.D. or a health-professional doctorate. This high proportion with doctorate degrees is attributable to the fact that most doctorate-granting institutions require an earned doctorate as a prerequisite for acquiring tenure faculty rank. Consequently, three-fourths of all the scientists and engineers in doctorate-granting institutions hold a doctorate degree, while in nonscience-degree-granting institutions,[3] doctorate holders account for only 15 percent of the total.

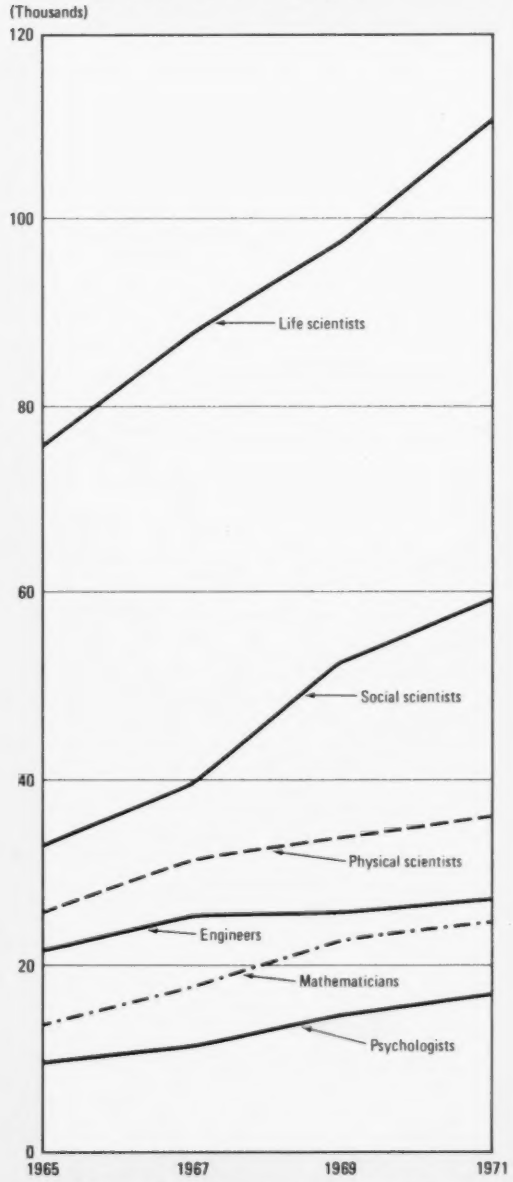
The most significant adjustment occurred in the social sciences, growing from 18 percent of the total in 1965 to 22 percent in 1971. Employment in the life sciences has increased steadily, although at a moderate 7-percent annual rate from 1965 to 1971. Other areas such as mathematics and psychology experienced rapid growth from 1965-69, and rather moderate growth during the 1969-71 period.

Scientists and engineers employed in universities and colleges, by field of employment



SOURCE: National Science Foundation (Appendix Table B-2)

[3] Here and elsewhere in this report, the terms "no-science-degree" refers to institutions that offer no degrees in the sciences and engineering at the baccalaureate or higher level.

Function

The primary function of scientists and engineers in the academic sector shifted towards more teaching and less research between 1965 and 1971. During this period those employed primarily as teachers increased from 68 percent of total employment in 1965 to 73 percent in 1971, while those primarily engaged in research declined. Those teaching in the social sciences, psychology, and mathematics significantly increased their share of the total reported primarily as instructors. In contrast, no appreciable change in the distribution of research scientists occurred. Life scientists continued to account for three-fifths the number engaged primarily in R&D activities.

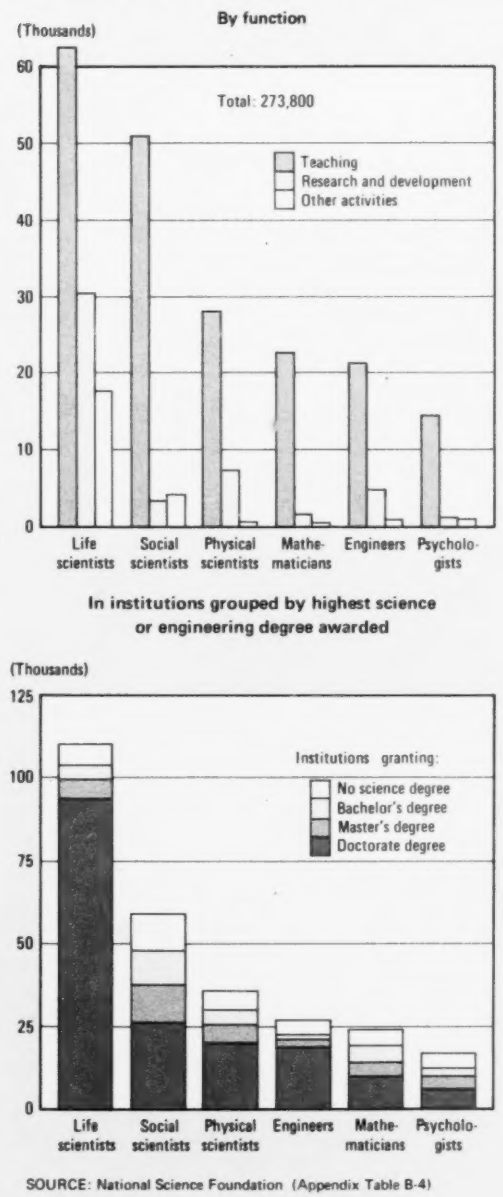
Type of Institution

Doctorate-granting institutions employed 64 percent of all scientists and engineers and 86 percent of the life scientists in the university and college sector. The principal factor contributing to this concentration is the large number of personnel employed in university-affiliated medical schools, hospitals, and agricultural experiment stations.

Medical schools and their affiliated hospitals and clinics employed 56,000 scientists and engineers, or 20 percent of those employed in all units of universities and colleges. Nearly all of the scientists employed at medical schools were life scientists and 84 percent of these were engaged in the medical sciences. These personnel accounted for 77 percent of all the medical scientists in the higher education sector.

Social scientists rank second in terms of numbers employed, with 22 percent of the sector total. Their influence on employment levels within institutions granting master's, bachelor's, or no-science degrees is, however, significant since they represent the predominant field of science with 36 percent, 39 percent, and 30 percent of the total, respectively.

Scientists and engineers employed in universities and colleges, by field, 1971



SOURCE: National Science Foundation (Appendix Table B-4)

Geographic Distribution

Universities and colleges in the highly urbanized Middle Atlantic and East North Central divisions account for 39 percent of total scientific and engineering employment. This ratio has remained constant for the last 6 years.

Institutions in the West North Central division maintained a 7-percent annual growth from 1969-71; however, this was significantly below the 10-percent rate established between 1965 and 1969. The New England growth also slowed from a 9-percent annual rate between 1965 and 1969 to only 3 percent in the 1969-71 period. Harvard University and the Massachusetts Institute of Technology together employed 800 fewer scientists and engineers in 1971 than in 1969.

There were seven States with 10,000 or more scientists and engineers employed in their universities and colleges; together these seven accounted for 47 percent of the U.S. total. New York educational institutions lead the list with 34,000 scientists and engineers followed by California with 27,000.

Graduate Students

This portion of the report summarizes statistical data on graduate students who devote part of their time to graduate study while also receiving compensation for part-time work. This category includes graduate students receiving compensation as teaching or research assistants and those receiving other forms of financial aid that require professional services in the sciences and engineering. Excluded are graduate students receiving nonduty stipends and others who may be engaged in scientific and engineering activities on a noncompensatory basis.

Total graduate enrollment in the sciences and engineering increased at a 6 percent annual rate between 1965 and 1971, while employed graduate students increased by 8 percent per year. During this period *employed* graduate students increased from 22 percent of total enrollment in 1965 to 26 percent in 1971.

The 94,000 graduate students employed in universities and colleges in 1971 represent an annual growth of 6 percent over the 84,000 employed in 1969. This is a significant decrease from the 10-percent annual increase rate established between 1965 and 1969. Especially affected were students working in the physical sciences. These students, accounting for 26 percent of the graduate student total, experienced the lowest annual growth rate between 1969 and 1971, at 3 percent.

In terms of full-time equivalents, employed graduate students numbered 43,000 with an annual growth rate of only 3 percent. Like scientists and engineers, the number of FTE graduate students working on R&D projects experienced slower growth; the increase in their FTE numbers has fallen from an annual rate of 8 percent in the 1965-69 period to only 2 percent per year from 1969-71.

The FTE number of graduate students working as teaching assistants or instructors maintained a higher growth pattern than those working on R&D projects. Strength in the employment of graduate students as instructors in the life and social sciences as well as recent limitations of R&D funding account for the variance in growth patterns between graduate students in these two activities.

The physical and life sciences together accounted for one-half the number of teaching or research assistantships in 1970, and provided employment for one-half the number of graduate students working as scientists in 1971.

Graduate students working primarily as teaching assistants comprised the greatest proportion of employed students in all of the broad fields except the life sciences and engineering. In the life sciences both teaching assistants and those primarily working on R&D projects numbered 11,200. However, 58 percent of the graduate students employed as engineers were primarily working on R&D projects.

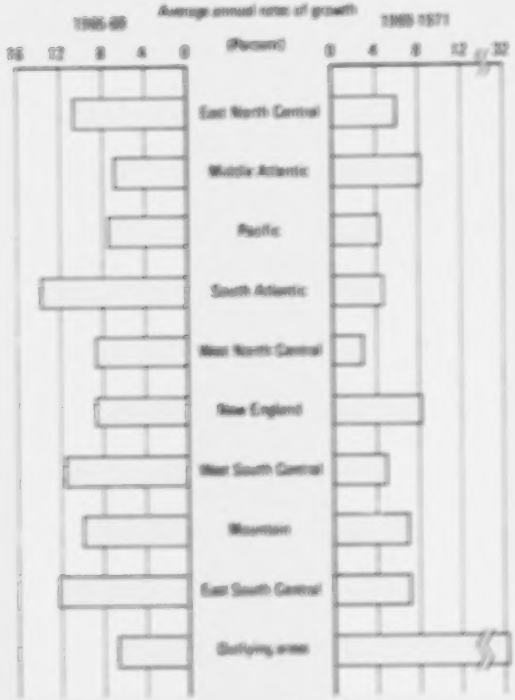
Graduate students employed in universities and colleges, by geographic division



SOURCE: National Science Foundation (Appendix Table B-13)

From 1969 to 1971, institutions in the Middle Atlantic division increased employment of graduate students at an annual rate of 8 percent, a higher rate than in the previous 4-year period. All other divisions experienced declining rates of growth in the current period when compared with employment patterns established between 1965 and 1969. The West North Central division was hardest hit, dropping from an annual growth of 9 percent from 1965-69 to only 3 percent in the 1969-71 time frame.

Technicians

Trends, 1965-71

The recent leveling off of Federal R&D support to universities and colleges has imposed more severe limitations on technician employment than on science professionals. Since 1969 technicians have experienced a slight decline in numbers compared with a 9-percent annual increase from 1965-69. This curtailment in employment has affected technicians employed in both R&D and "other" activities at universities and colleges.

Field of Employment and Function

The life sciences accounted for three-fourths of all science and engineering technicians employed at universities and colleges in 1971. Medical and health-related technicians working primarily in medical schools and affiliated hospitals alone represent 36 percent of the technician total. Biological technicians working in agricultural experiment stations along with large numbers in medical schools account for an additional 28 percent of the total.

Although 69 percent of all technicians were primarily employed on R&D projects in 1971, this ratio varied considerably when analyzed by field of employment. The heaviest concentration of R&D technicians, 77 percent, occurred in the biological sciences compared with only 58 percent in the social sciences.

Type of Institution

Science technicians are almost exclusively employed at doctorate-granting institutions where extensive research in life science facilities requires large numbers of support personnel. Medical schools were the principal employer of technicians, accounting for 46 percent of the academic sector total. More than three-fourths of these were medical technicians, with most of the remainder working in the biological sciences.

Technician-Professional Ratios

In carrying out R&D activities, doctorate-granting institutions averaged 65 technicians per 100 FTE research professionals. This moderate utilization of technicians in R&D performance is more pronounced in medical schools where the ratio is nearly one technician per scientist or engineer.

Section 2. SCIENCE EXPENDITURES

Financing of Scientific Activities

Universities and colleges in the United States allocated $7.9 billion in current and capital expenditures for research, development, and instruction in the sciences and engineering during 1970. This amount represents 33 percent of the $24.2 billion expended by universities and colleges for all types of activities, a slight decline from the 36 percent ratio established in 1968.[1]

Growth in science expenditures levelled off at 6 percent per year (1 percent in constant dollars) for universities and colleges in the 1968-70 period after averaging increases of 15 percent during the previous 4 years (12 percent in constant dollars). Total nonscience funding during the 1968-70 period, however, being less sensitive to fluctuations in Federal support, advanced at an annual rate of 16 percent.

Doctorate-level institutions again, as in earlier survey years, accounted for nearly four-fifths of the total science expenditures. Nearly one-half of the remainder was spent by institutions granting the master's as the highest degree. These proportions have remained relatively stable since 1968.

The recent slowdown in the growth of science expenditures is much more apparent in private institutions than in those under public control. Between 1964 and 1968 the rates of growth in the two groups were quite similar; but between

[1] Estimates of total current and capital expenditures of universities and colleges are based on data in U.S. Office of Education, *Projections of Educational Statistics to 1979-80* (OE-10030-70) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1971), p. 91. The U.S. Office of Education figures for all institutions of higher education were adjusted to exclude expenditures of university-administered FFRDC's, which are presented at the end of this report.

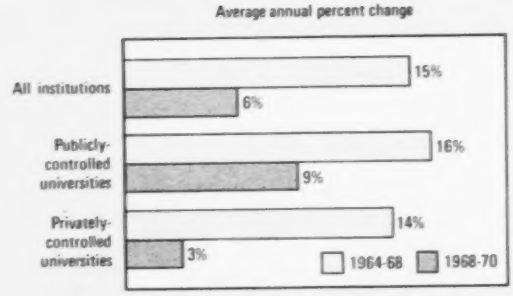
Growth in scientific and engineering expenditures of publicly and privately controlled universities and colleges, 1964-68 and 1968-70



SOURCE: National Science Foundation (Appendix Table B-19)

1968 and 1970 the growth rate in private institutions was only one-third that in public institutions. Private institutions are more heavily dependent on Federal science support since public institutions receive a large share of their science expenditures from State and local government appropriations.

Institutions under public control numbered 1,054, including some 800 junior colleges. Although comprising only 48 percent of the institutions surveyed, this group was responsible for 64 percent of the scientific and engineering expenditures reported in the survey. Chiefly responsible were 17 large State universities with $50 million or more in science expenditures.

During the 1968-70 period, the change in funding levels varied considerably among the three types of science expenditures. Science instruction showed a substantial 11-percent annual growth while current R&D expenditures managed only 5 percent per year. Capital expenditures actually declined 5 percent per year. The following table, showing the distribution of science and engineering expenditures, emphasizes the continued growth in instruction and the levelling off of research and development and capital expenditures since 1964.

	1964	1966	1968	1970

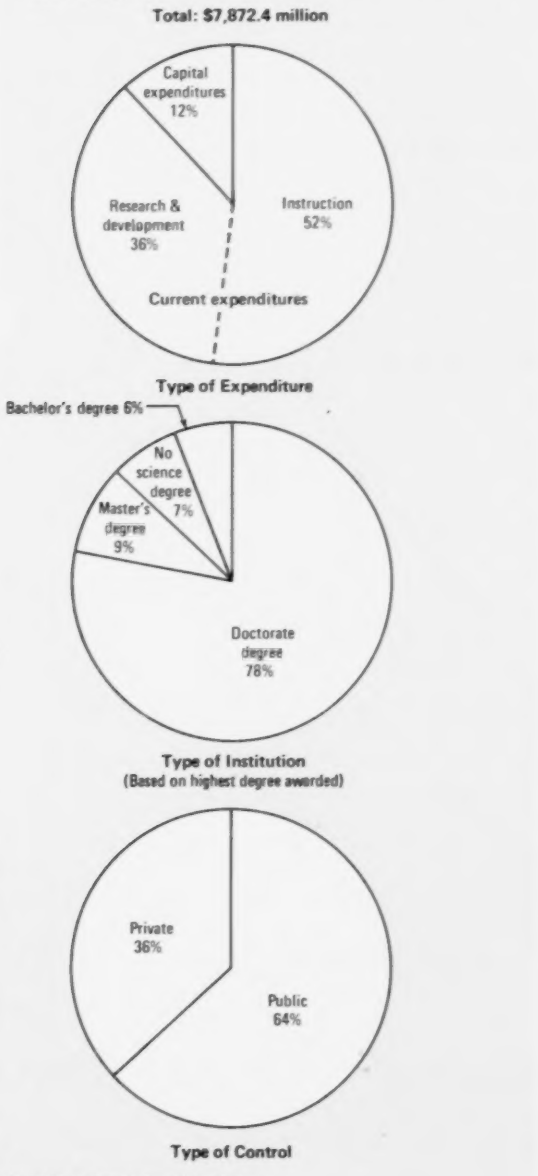
Selected characteristics of current and capital expenditures for research, development, and instruction in the sciences and engineering in universities and colleges, 1970



SOURCE: National Science Foundation

Current R&D Expenditures

The Nation's institutions of higher education allocated $2.9 billion to current expenditures for research and development in 1970, 11 percent of total R&D expenditures reported by all sectors of the economy. The 5-percent annual growth over the 1968 total marks a considerable slowdown from the average annual increase of 13 percent between 1964 and 1968. When measured in terms of 1964 dollars, growth in the 1964-68 period drops to 10 percent per year and the 1968-70 increase is erased.

The 1968-70 decline in the rate of R&D growth in the academic sector, however, was less than that experienced in the other sectors. The proportion of the Nation's R&D effort conducted in universities and colleges has increased from 8 percent in 1964 to 11 percent in 1970.

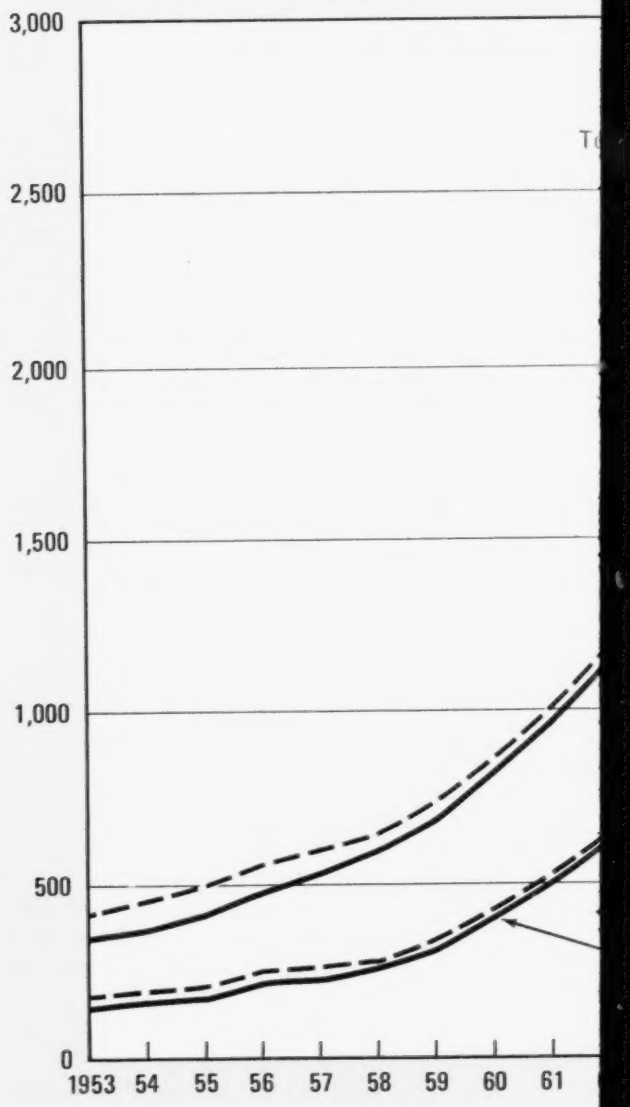
(Millions of dollars)



[a]Based on the GNP implicit price deflator

SOURCE: National Science Foundation (Appendix Table B-2

Source of Funds

Universities and colleges rely upon outside sources of support for more than three-fourths of the total funds expended for research and development. There has been a steady rise over the years in the Federal Government's share of total R&D expenditures among institutions of higher education. Since 1968, however, the Federal share levelled off at about three-fifths the academic R&D total. While Federal funds have continued to increase, their annual growth rate has fallen to 3 percent between 1968 and 1970 compared to 14 percent between 1964 and 1968. In constant dollars, Federal funds have actually declined 2 percent since 1968. Non-Federal sources of support have not compensated in total for this slowdown in Federal R&D funds.

tion (Appendix Table B-22)

Character of R&D

Universities and colleges have traditionally performed more basic research than applied research and development combined; and until 1964, the trend was toward ever increasing concentration in basic research. Since 1964, however, basic research expenditures have stabilized at about 77 percent of total academic R&D expenditures; they have shown an average annual increase of 10 percent compared with a 20 percent yearly growth rate between 1953 and 1964. On the other hand, expenditures for applied research and development increased 12 percent annually between 1964 and 1970 after showing an average annual growth of only 7 percent throughout the earlier period.

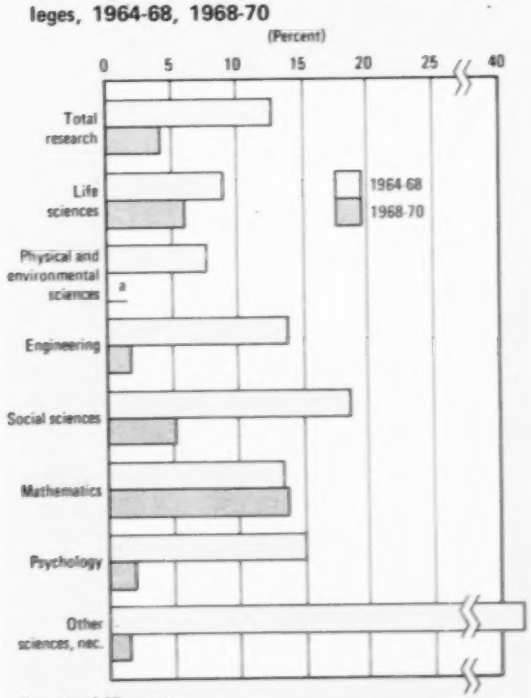
Federal funds were an important factor in this shift in emphasis. Between 1964 and 1970, Federal development funds grew an average of 29 percent annually, nearly two times the growth rate of non-Federal funding in this area. In 1964 the ratio of Federal development funds to non-Federal was 1.3 to 1; by 1970, this ratio had grown to 2.6 to 1. R&D programs of two agencies, National Aeronautics and Space Administration (NASA) and the Department of Health, Education, and Welfare (HEW), contributed heavily to the growth in development activities undertaken in institutions of higher education.

Applied research expenditures grew continuously throughout the 1953-70 period, averaging a somewhat higher average rate of increase after 1964 than in the earlier years. This increase occurred even in the face of 2 years of the smallest increase since 1955 - 2 percent in 1969 and 5 percent in 1970. This activity, however, has shown a relatively steady decline in its share of academic R&D expenditures since 1953, from 44 percent to 18 percent in 1970.

Fields of Science

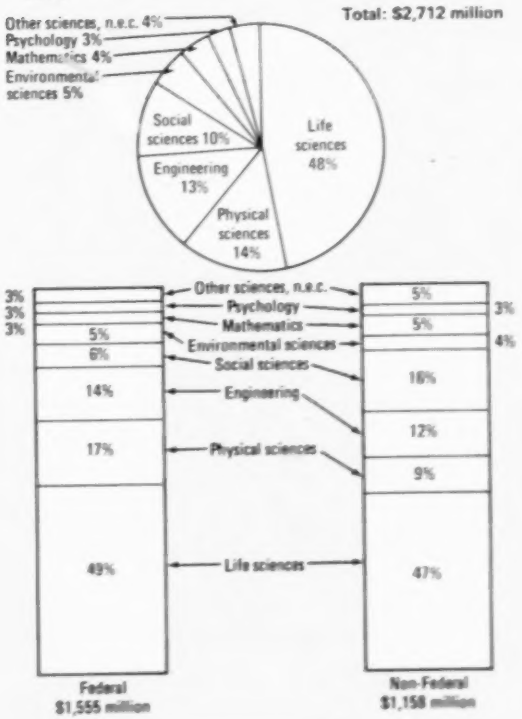
The 1964-70 period has seen very little change in the distribution of academic research expenditures among fields of science. Basic and applied research in the life sciences have averaged nearly one-half total and Federal research expenditures at universities since 1964. The growth rate in total research expenditures in this field has been steadily falling during this 6-year time span, the direct result of the slowdown in the rate of increase in Federal support. This decline in the growth rate of Federal funding for life science research is also reflected in the total expenditures reported by medical schools but to a somewhat lesser extent than experienced by other units of universities and colleges.

Average annual growth of current research expenditures by field of science in universities and colleges, 1964-68, 1968-70



aLess than 0.05 percent.
SOURCE: National Science Foundation (Appendix Table B-28)

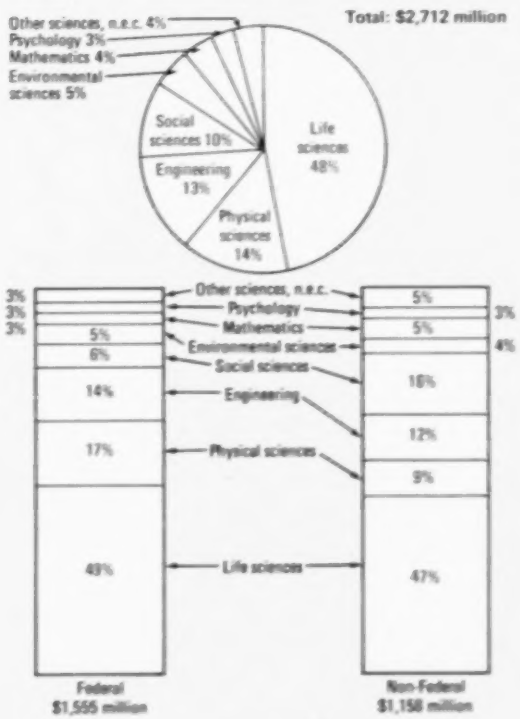
Current research expenditures of universities and colleges, by field of science, and source of funds, 1970



SOURCE: National Science Foundation (Questionnaire P. 99)

Social science research performed at institutions of higher education is the only area in which Federal funds have not consistently exceeded support from all other sources. The Federal share of funding of social science research reached a high of 40 percent in 1968; in the other years between 1964 and 1970 Federal funds ranged from 33 percent to 36 percent of total social science research expenditures. Federal funding for basic and applied research in this area was actually down in 1970 from the 1968 amount as was the case in psychology, physical and environmental sciences, and engineering.

Current research expenditures of universities and colleges, by field of science, and source of funds, 1970



SOURCE: National Science Foundation (Questionnaire P. 599

Social science research performed at institutions of higher education is the only area in which Federal funds have not consistently exceeded support from all other sources. The Federal share of funding of social science research reached a high of 40 percent in 1968; in the other years between 1964 and 1970 Federal funds ranged from 33 percent to 36 percent of total social science research expenditures. Federal funding for basic and applied research in this area was actually down in 1970 from the 1968 amount as was the case in psychology, physical and environmental sciences, and engineering.

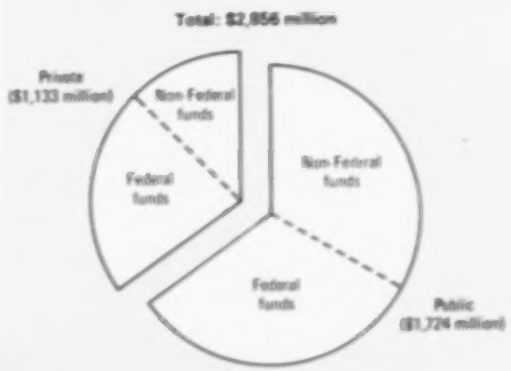
Type of Control

Publicly controlled universities and colleges accounted for three-fifths of the current R&D expenditures of all institutions. This primarily reflects the influence of the large State universities, 33 of which are among the top 50 institutions in the country in terms of R&D expenditures.

While the rate of growth in R&D expenditures has declined for both groups of institutions during the 1964-70 period, the reduction was much more severe among private institutions. For the 1964-68 period, the average annual growth rate for public institutions was 14 percent compared with 12 percent for private institutions; while in the 1968-70 period, the rates were 7 percent and 1 percent, respectively.

The Federal Government supplied 51 percent of the funds used by public institutions, compared with 69 percent of those used by institutions under private control.

Current R&D expenditures of universities and colleges, by type of control and source of funds, 1970



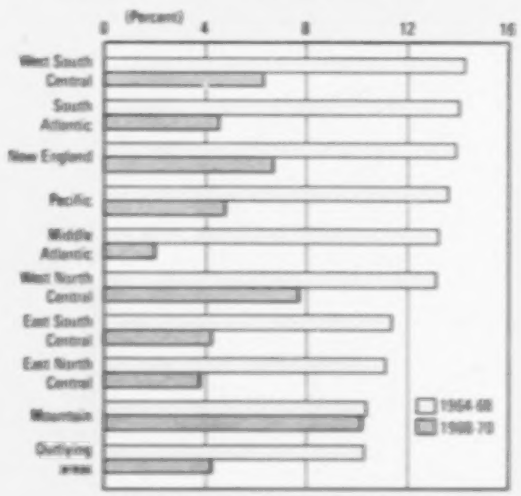
SOURCE: National Science Foundation

Geographic Distribution

During the 1964-68 period, the distribution of R&D expenditures among individual geographic divisions remained relatively stable. The rates of increases varied no more than 4 percentage points; the median growth rate was 13 percent. Between 1968 and 1970, however, the average annual increase in R&D expenditures ranged from 2 percent in the East North Central to 10 percent in the Mountain division.

As growth rates varied, the geographic pattern of R&D spending did show a slight shift. The highly urbanized Middle Atlantic and East North Central divisions' share of the total R&D expenditures among universities and colleges declined from 38 percent in 1968 to 36 percent in 1970, the Middle Atlantic showing the lowest growth rate of any division in the 1968-70

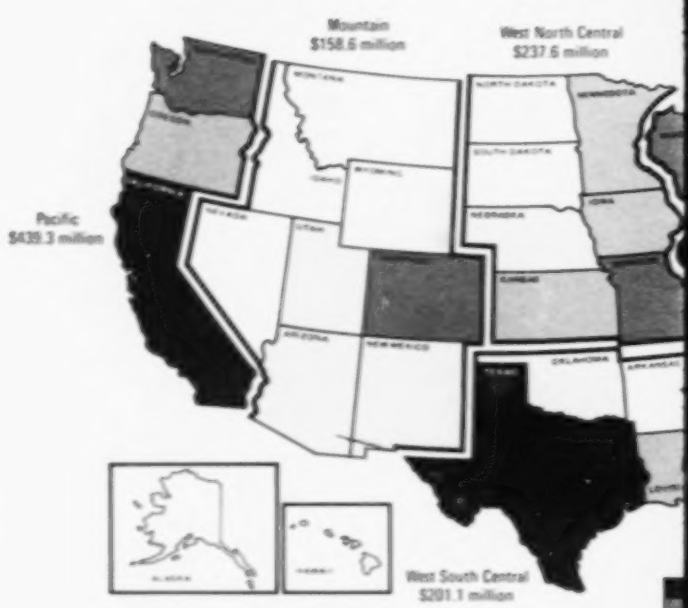
Annual rates of change in current R&D expenditures of universities and colleges, by geographic distribution, 1964-68 and 1968-70



SOURCE: National Science Foundation (Appendix Table B-25)

Geographic distribution of current R&D expenditure

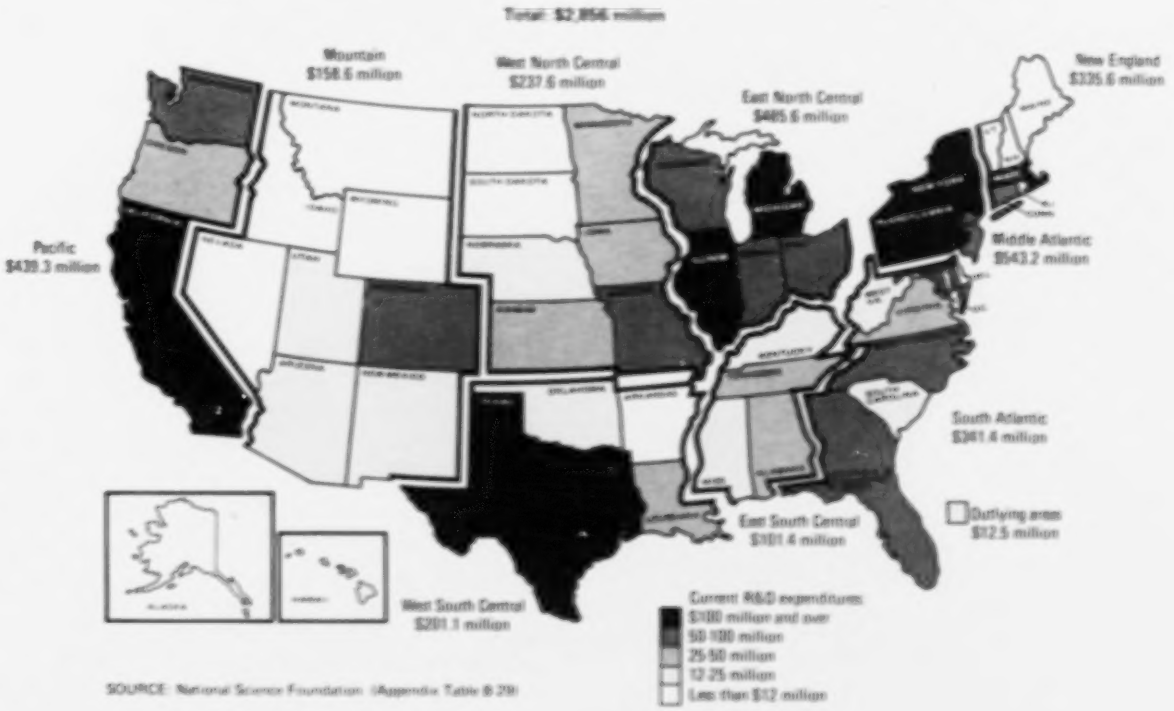
Total: $2,856 million



SOURCE: National Science Foundation (Appendix Table B-29)

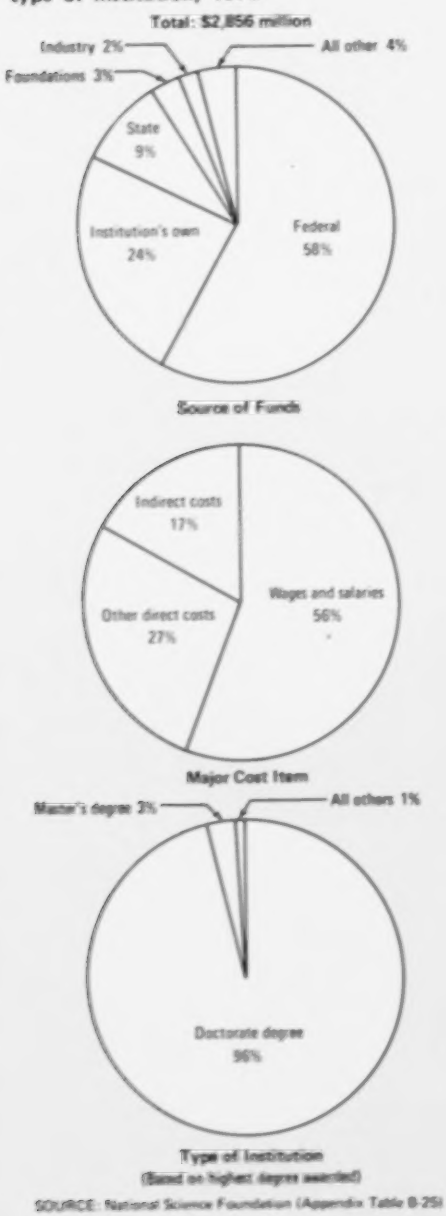
As growth rates varied, the geographic pattern of R&D spending did show a slight shift. The highly urbanized Middle Atlantic and East North Central divisions' share of the total R&D expenditures among universities and colleges declined from 38 percent in 1968 to 36 percent in 1970, the Middle Atlantic showing the lowest growth rate of any division in the 1968-70 period. Four of the seven States in which R&D expenditures of institutions of higher education totaled more than $100 million belong to these two divisions. Together, the R&D expenditures of these four States grew only 2 percent per year during 1968-70 compared to 12 percent between 1964 and 1968.

Geographic distribution of current R&D expenditures of universities and colleges, 1970



SOURCE: National Science Foundation (Appendix Table B-29)

Current R&D expenditures of universities and colleges, by source of funds, major cost item, and type of institution, 1970



SOURCE: National Science Foundation (Appendix Table B-25)

Selected Characteristics

Institutions granting doctorate degrees accounted for 96 percent of current R&D expenditures. This total includes 96 percent or more of the R&D funds from every source except institutions' own funds and private philanthropic foundations. In earlier surveys, the doctorate-granting institutions' share was slightly lower. Thus, the recent slowdown in R&D increases was felt more severely in nondoctorate-granting institutions with less prominent research facilities.

Academic institutions allocated 56 percent of their current R&D expenditures for wages and salaries in 1970. While this proportion has remained relatively constant since 1964, the slackened growth in Federal R&D support has affected the proportion allocated for materials, supplies, and other direct costs. Federal funds allocated to these purposes declined 2 percent per year since 1968, while non-Federal funds maintained an 8 percent annual growth. Other direct costs, therefore, dropped from 30 percent of the 1964 R&D total to 27 percent in 1970.

Current Expenditures for Instruction

Institutions of higher education allocated $4.1 billion of current funds to instruction expenditures in the sciences and engineering in 1970. This total includes all direct and indirect costs pertaining to educational programs for students pursuing degree-credit courses of study. Such costs include faculty salaries, stipends for graduate teaching assistants, clerical salaries, and expendable materials and supplies.

Estimates for direct and indirect expenditures for departmental research have been excluded from this section and reported as part of total R&D expenditures. The actual or reported expenditures for instruction and departmental research combined, and the methodology used

Selected Characteristics

Institutions granting doctorate degrees accounted for 96 percent of current R&D expenditures. This total includes 96 percent or more of the R&D funds from every source except institutions' own funds and private philanthropic foundations. In earlier surveys, the doctorate-granting institutions' share was slightly lower. Thus, the recent slowdown in R&D increases was felt more severely in nondoctorate-granting institutions with less prominent research facilities.

Academic institutions allocated 56 percent of their current R&D expenditures for wages and salaries in 1970. While this proportion has remained relatively constant since 1964, the slackened growth in Federal R&D support has affected the proportion allocated for materials, supplies, and other direct costs. Federal funds allocated to these purposes declined 2 percent per year since 1968, while non-Federal funds maintained an 8 percent annual growth. Other direct costs, therefore, dropped from 30 percent of the 1964 R&D total to 27 percent in 1970.

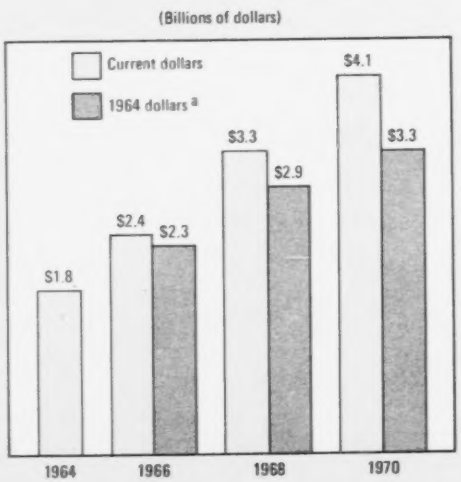
Current Expenditures for Instruction

Institutions of higher education allocated $4.1 billion of current funds to instruction expenditures in the sciences and engineering in 1970. This total includes all direct and indirect costs pertaining to educational programs for students pursuing degree-credit courses of study. Such costs include faculty salaries, stipends for graduate teaching assistants, clerical salaries, and expendable materials and supplies.

Estimates for direct and indirect expenditures for departmental research have been excluded from this section and reported as part of total R&D expenditures. The actual or reported expenditures for instruction and departmental research combined, and the methodology used in deriving the estimates for departmental research are shown in the technical notes and consolidated questionnaires in appendixes A, B, and C of this report.

Instruction expenditures based on enrollment, are less sensitive to budgetary fluctuations than are either current or capital R&D expenditures. The $4.1 billion represents an 11-percent annual growth rate since 1968; this increase was less than the 16-percent annual rate established during the 1964-68 period. In comparison, the annual growth in R&D expenditures dropped from 13 percent during 1964-68 to 5 percent between 1968 and 1970, while the 19 percent growth in capital expenditures during 1964-68 turned into a 5 percent per year decrease. In terms of constant dollars, the rate of increase in instruction expenditures was 6 percent between 1968 and 1970.

Current expenditures for instruction in the sciences and engineering in universities and colleges



[a]Based on GNP implicit price deflator.
SOURCE: National Science Foundation

The life sciences accounted for the largest share, with 32 percent of the total, far below the 48 percent life science share of research expenditures. The life science proportion has been steadily decreasing since 1964, when it was 37 percent of the total. Social sciences, on the other hand, have been increasing throughout the same period, from 18 percent in 1964 to 23 percent in 1970. This is substantially higher than their 10 percent share of research expenditures.

Doctorate-granting institutions, although accounting for 66 percent of total instruction expenditures, did not have the near-monopoly (96 percent) displayed in the case of current R&D expenditures. The fact that all institutions included in the survey had instructional programs in the sciences or engineering partially offset the large programs evident at doctorate-granting institutions.

The life sciences accounted for the largest share of the total only in doctorate-granting institutions. In all other types of institutions, the largest proportion of current instruction expenditures was allocated to the social sciences. The uniqueness of doctorate-granting institutions is largely due to the influence of medical schools and schools of agriculture.

In medical schools, the life sciences accounted for 99 percent of all current instruction expenditures. The $581 million spent for instruction by medical schools represents a 9-percent compound annual increase rate over the 1968 figure, $488 million, which is slower than the 15-percent rate of the 1964-68 period.

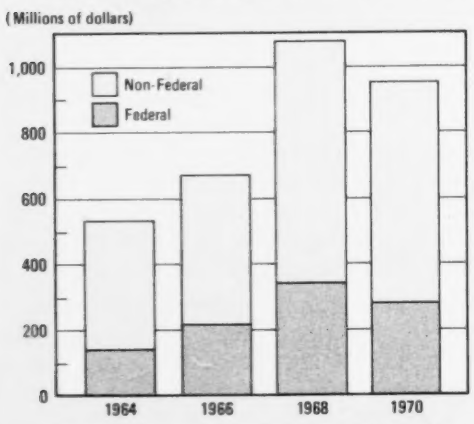
Capital Expenditures

Institutions of higher education allocated $952 million to capital expenditures for research, development, and instruction in the sciences and engineering in 1970, a reduction of 5 percent per year from the $1.1 billion reported in 1968. Federally financed expenditures shared in the decline as well as the earlier sharp rise. Between 1964 and 1968 Federal support increased at an annual rate of 26 percent, compared with a decline of 9 percent per year in the 1968-70 period.

The rising trend in the proportion of capital expenditures allocated to undergraduate instruction facilities was reversed between 1968 and 1970. This estimated proportion went from 45 percent of the total in 1964 to 51 percent in 1968, and back to 47 percent in 1970. The shift in Federal funds towards R&D and graduate instruction, and a 13-percent annual decline in Federal support for undergraduate facilities between 1968 and 1970, were primarily responsible.

Capital expenditures for scientific and engineering facilities and equipment, by source of funds



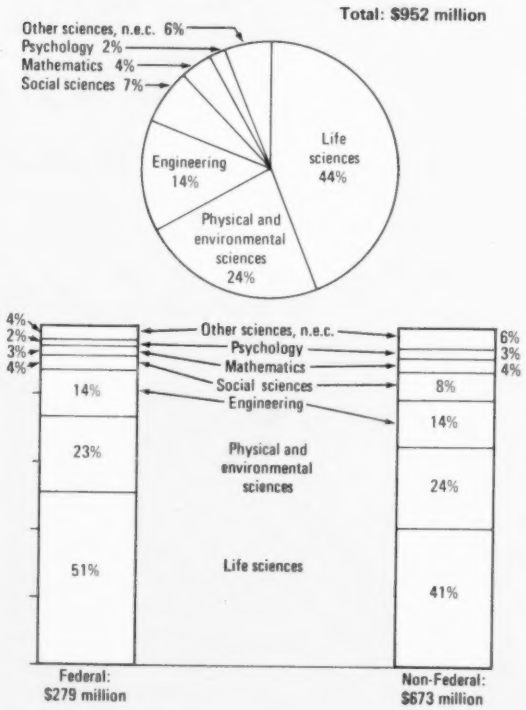
SOURCE: National Science Foundation (Appendix Table B-35)

Medical schools accounted for 22 percent of all science and engineering capital expenditures in 1970 and 37 percent of all those for research, development, and graduate instruction. Only 11 percent of the capital expenditures of medical schools were allocated to undergraduate instruction.

All fields of science shared in the phenomenal growth of capital expenditures during the 1964-68 period, with annual rates of increase ranging between 12 percent and 25 percent. During the decline in the 1968-70 period, however, two fields – engineering and other sciences, n.e.c. – continued to increase, though at much reduced rates, while expenditures in the other fields showed declining rates of up to 17 percent per year. Mathematics was the most active field, going from an increase of 25 percent per year to a decrease of 14 percent per year in the 6-year period.

As was the case with current expenditures, the life sciences accounted for the largest portion of scientific and engineering capital expenditures. Over one-half of the capital expenditures financed by the Federal Government were allocated to the life sciences, compared with only 41 percent of those financed by other sources.

Capital expenditures for research, development, and instruction in the sciences and engineering, by field of science and source of funds, 1970



SOURCE: National Science Foundation (Questionnaire P. 60)

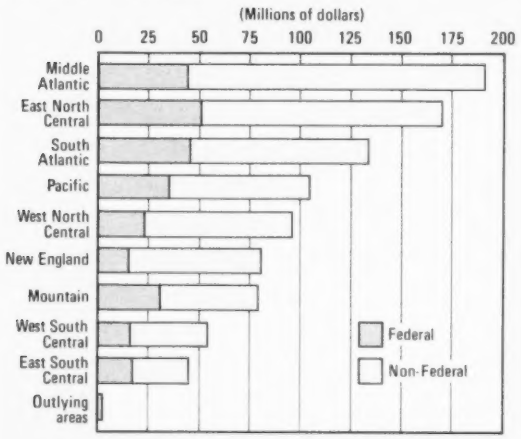
Geographic distribution of capital expenditures for research, development, and instruction in the sciences and engineering in universities and colleges, by source of funds, 1970



SOURCE: National Science Foundation (Appendix Table B-34)

The decline in capital expenditures between 1968 and 1970 was greatest in the West South Central and Middle Atlantic divisions, both of which reported reductions at annual rates exceeding 10 percent, while New England and the West North Central and Mountain States continued to increase.

The same four geographic divisions that accounted for the majority of current expenditures - the Middle Atlantic, East North Central, South Atlantic and Pacific States - accounted for the majority of capital expenditures. These divisions accounted for 63 percent of both total and federally financed capital.

The federally financed proportion of total capital expenditures ranged from a high of 39 percent in the East South Central and Mountain States to a low of 19 percent in New England and 14 percent in the outlying areas.

Part II

FEDERALLY FUNDED RESEARCH AND DEVELOPMENT CENTERS ADMINISTERED BY UNIVERSITIES AND UNIVERSITY CONSORTIA

Federally Funded Research and Development Centers (FFRDC's) are R&D performing organizations substantially financed by the Federal Government to meet either a particular R&D objective or, in some instances, to provide major facilities at universities for research and associated training purposes. This report is limited to summary data on the manpower and financial characteristics of FFRDC's administered by universities and university consortia. Data presented here are excluded from those for universities and colleges shown in part I of this report.

Each FFRDC is a separate operational unit which conducts R&D work upon direct request of, or under a broad charter from, the sponsoring Federal agency. Organizationally, the centers are separate from the administering institution, and are self-contained entities insofar as their R&D work is concerned. Staffs normally are separate from those of the university; however, in some cases, staff members also hold faculty appointments with the university. Most FFRDC's, however, make their extensive facilities available to faculty and graduate students of the administering university for the conduct of research.

Section 1. SCIENTIFIC AND TECHNICAL PERSONNEL

Scientists and Engineers

The 35 university-administered FFRDC's employed 11,300 scientists and engineers in 1971. Since 1965, however, the employment level in the FFRDC's has been virtually unchanged, and small decline due to severe limitations in Federal R&D support.

The primary function of FFRDC's is R&D performance or management. It is, therefore, not surprising that virtually all scientists and engineers are engaged in R&D work.

The distribution of scientists among broad fields of employment in FFRDC's differed considerably from universities and colleges. The large numbers of engineers and physical scientists employed at FFRDC's reflect the close association between their R&D activities and the missions of their sponsoring agencies. Nearly two-thirds the research professionals at DOD- and NASA-sponsored FFRDC's were engineers while physical scientists comprised one-half the research staff at AEC-sponsored centers.

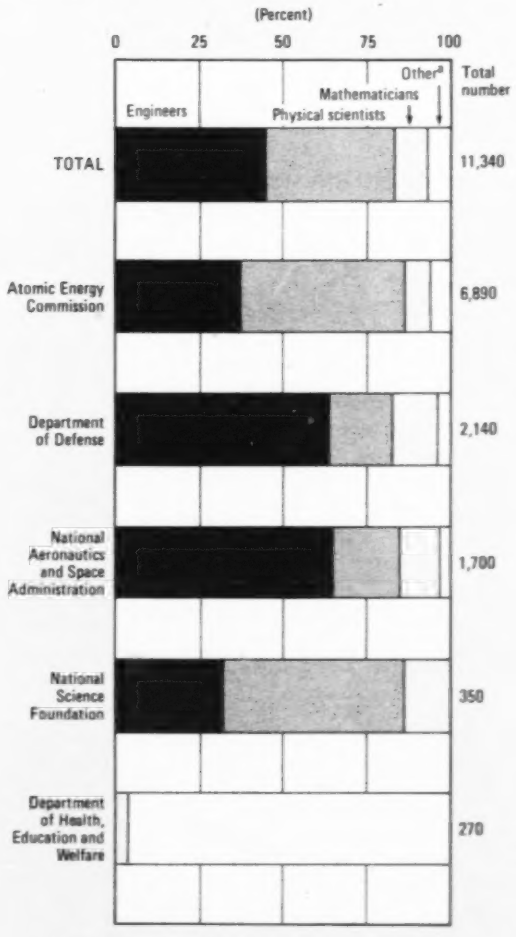
Employment of scientists and engineers at university-administered FFRDC's, by sponsoring Federal agency and field of employment, 1971



[a]Other scientists include psychologists, life and social scientists.
SOURCE: National Science Foundation (Appendix Table D-1.)

Graduate Students

FFRDC's supported by the AEC employed over one-half the graduate students employed in all such centers, and nine-tenths of those working in the physical sciences. This graduate student employment is heavily concentrated in two FFRDC's - Lawrence Radiation Laboratory and Ames Laboratory. The 10 Centers sponsored by the U.S. Office of Education (OE) employed virtually all of their graduate students on projects requiring psychologists or social scientists.

Technicians

Large numbers of technicians are employed by FFRDC's to support their professional staff. Nearly all were primarily engaged in research and development and 83 percent were employed by FFRDC's supported by the Atomic Energy Commission. The four largest AEC laboratories accounted for 71 percent of the FFRDC total. Most of the technicians are classified in engineering fields although employed by FFRDC's which primarily perform research in the physical sciences.

Section 2. FINANCING OF SCIENTIFIC ACTIVITIES

Current R&D Expenditures

University-administered FFRDC's expended $900 million in 1970 for current R&D performance and capital outlays. Although these organizations provide research opportunities for faculty and students, they do not conduct instructional programs in the sciences and engineering as defined for survey purposes.

R&D expenditures in university-administered FFRDC's increased from $121 million in 1953 to $737 million in 1970, an annual rate of 11 percent. Since 1964, however, growth has slowed to an annual rate of 3 percent.

In recent years the R&D effort at FFRDC's has shifted slightly towards more development and less basic research. A significant shift from basic and applied research to development occurred at Lincoln Laboratories when their solid-state physics and computer science research became more problem-oriented rather than unstructured.

Current R&D expenditures in university-administered FFRDC's, by character of work

[a]Federally Funded Research and Development Centers.
[b]Includes $2.7 million in non-Federal funds.

SOURCE: National Science Foundation (Appendix Table D-4)

University-administered FFRDC's sponsored by the AEC alone supported 63 percent of all current R&D expenditures and 73 percent of all basic research expenditures. DOD ranked second with 18 percent of the total and 37 percent of all development support. FFRDC's sponsored by the National Science Foundation (NSF) allocated all of their expenditures to basic research. These organizations, therefore, accounted for 10 percent of basic research expenditures compared with only 4 percent of total R&D expenditures.

Nearly three-fourths of all FFRDC research is supported by AEC and is performed in the physical and environmental sciences. Centers supported by DOD and NASA are heavily engaged in R&D projects involving precision engineering and advanced engineering applications.

Technical Notes

Scope and Coverage

This report is based on the National Science Foundation's (NSF's) "Survey of Scientific Activities of Institutions of Higher Education, 1971," the fourth in a series of biennial surveys inaugurated in 1964.[1] Survey questionnaires were mailed out in December 1970 to about 2,400 institutions of higher education, all those in the United States and U.S. possessions thought to have programs in the sciences and engineering. About 300 small schools specializing in art, music, theology, and other nonscientific fields were excluded, and a further 100 were deleted from the survey universe during the data-collection period, bringing the final total to 2,198 (appendix table A-1).

Followup queries were mailed out to the smaller nonrespondents in March and May of 1971; telephone contact was maintained with the 200 institutions believed on the basis of prior surveys to have spent the largest amounts on research and development from current funds. By the closeout date of July 15, usable replies had been received from 1,577 universities and colleges, or 72 percent of the universe (appendix table A-2).

Because of the intensive followup procedures employed with the larger universities, the figures are believed to be more accurate than the 28 percent nonresponse rate would indicate. Most of the nonrespondents were smaller institutions in terms of science and engineering expenditures, as is shown in the following tabulation:

Top 100 institutions	95 respondents
Second 100 institutions	92 respondents
Top 200 institutions	187 respondents (93.5%)
All other institutions	1,390 respondents (69.6%)

These 200 largest institutions in terms of science activities account for 95 percent of all R&D expenditures, 62 percent of the scientists and engineers employed, and 91 percent of all graduate students receiving compensation for part-time services as scientists and engineers.

Methods of Estimating for Nonresponse

Estimates for the 621 institutions which failed to return completed questionnaires were based on three types of sources: first, other surveys, such as the Higher Education General Information Survey, conducted annually by the National Center for Educational Statistics of the U.S. Office of Education and the American Council on Education's quadrennial publication, *American Universities and Colleges*[2]; second, institutional sources such as catalogs, treasurer's reports, and similar publications; and third, the completed questionnaires of the individual institutions for earlier surveys in the series.

Totals from these sources were distributed by field, function, etc., by computer, using summary distributions taken from respondent institutions of each type. The same system was used in those cases where institutions reported total values for particular items but were unable to give detailed breakdowns.

In some cases, institutions were able to complete some items on the questionnaire but unable to fill out others. To estimate for these, a system of ratios between key variables was de-

[1] Data obtained in earlier surveys in the series have been published by NSF in *Scientific Activities at Universities and Colleges, 1964* (NSF 68-22), 1968; and *Resources for Scientific Activities at Universities and Colleges, 1969* (NSF 70-16), 1970 (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office). No separate report was issued on the 1966 survey; however, results of that survey are included in summary form in the report on the 1969 survey. Data collected in the three surveys conducted prior to the inception of the present series have been published in *NSF's Scientific Research and Development in Colleges and Universities–Expenditures and Manpower, 1953-54*, 1958; *Scientific Research and Development in Colleges and Universities–Expenditures and Manpower, 1958*, 1963; and *Scientists and Engineers in Colleges and Universities, 1961*, 1965.

[2] Otis A. Singletary, *American Universities and Colleges*, 10th Edition (Washington, D.C. 20036: American Council on Education, 1968).

Followup queries were mailed out to the smaller nonrespondents in March and May of 1971; telephone contact was maintained with the 200 institutions believed on the basis of prior surveys to have spent the largest amounts on research and development from current funds. By the closeout date of July 15, usable replies had been received from 1,577 universities and colleges, or 72 percent of the universe (appendix table A-2).

Because of the intensive followup procedures employed with the larger universities, the figures are believed to be more accurate than the 28 percent nonresponse rate would indicate. Most of the nonrespondents were smaller institutions in terms of science and engineering expenditures, as is shown in the following tabulation:

These 200 largest institutions in terms of science activities account for 95 percent of all R&D expenditures, 62 percent of the scientists and engineers employed, and 91 percent of all graduate students receiving compensation for part-time services as scientists and engineers.

Methods of Estimating for Nonresponse

Estimates for the 621 institutions which failed to return completed questionnaires were based on three types of sources: first, other surveys, such as the Higher Education General Information Survey, conducted annually by the National Center for Educational Statistics of the U.S. Office of Education and the American Council on Education's quadrennial publication, *American Universities and Colleges*[2]; second, institutional sources such as catalogs, treasurer's reports, and similar publications; and third, the completed questionnaires of the individual institutions for earlier surveys in the series.

Totals from these sources were distributed by field, function, etc., by computer, using summary distributions taken from respondent institutions of each type. The same system was used in those cases where institutions reported total values for particular items but were unable to give detailed breakdowns.

In some cases, institutions were able to complete some items on the questionnaire but unable to fill out others. To estimate for these, a system of ratios between key variables was devised. For example, if an institution reported the number of scientists and engineers, but was unable to give a figure for instruction and departmental research, the latter figure was estimated on the basis of teaching full-time equivalents (FTE's), at ratios which varied according to the type of institutions.

Nonseparately Budgeted R&D Expenditures

The figures published in the body of this report refer to all current expenditures for research and development in universities and colleges. Of the $2.9 billion total, separately budgeted R&D expenditures amounted to $2.4 billion, and departmental research and other R&D activities for which universities and colleges do not maintain separate records were estimated at $500 million. This amount includes funds allocated to departmental research by the various academic departments, as well as some indirect costs associated with R&D performance (cost-sharing).

In order to convert "current expenditures for separately budgeted research" into "total current R&D expenditures" and "current expenditures for instruction and departmental research" into "current expenditures for instruction," an estimated $500 million was subtracted from the latter figure and added to the former. This $500 million was distributed by field of science, character of work and cost item based on ratios established in this survey and earlier surveys. All nonseparately budgeted research and development was considered to be part of institutions' own funds.

Limitations

Since the universe for the survey consisted of all institutions of higher education known or believed to have engaged in scientific or engineering activities, the data presented in this report are not subject to a sampling error. However, some limitations must be taken into account stemming from unevenness of response rate, lack of agreement among respondents concerning survey definitions, and the inadequacy of accounting procedures utilized by some institutions.

The lack of agreement on the interpretation of survey definitions is perhaps the source of the major limitation to the interpretation of survey data, followed by the difficulty of measuring certain aspects of scientific and engineering activities. Estimates made by NSF staff members, being based where possible on the published records of the institutions in question, are believed to be accurate within a margin of 5 percent at aggregate levels. Similarly, as the biennial survey series closes its fourth cycle, the magnitude of the error attributable to the inadequacy of institutional recordkeeping procedures is constantly decreasing as more and more institutions, especially the larger ones, revise their procedures to yeild the information requested.

[a]Excludes about 350 independent schools of music, art, theology, law, and other specialized institutions that do not conduct science or engineering programs. Also excludes 36 university-administered FFRDC's, which are listed in appendix D.

[b]The number of doctorate-granting institutions shown here may differ from similar figures published elsewhere for the following principal reasons: (1) Lack of uniformity in classifying branches, affiliates, or other organizational components of university systems; (2) differing definitions of science and engineering fields; and (3) variations in the time-span covered by the classification (e.g. single year or longer period).

[c]Includes three institutions granting M.D. degrees that do not grant Ph.D. or Sc.D. degrees in the sciences or engineering. However, they are included as doctorate-granting institutions for the purpose of treating all medical schools uniformly.

Table A-2. Number of universities and colleges included in the survey of scientific activities of institutions of higher education and number that responded, by type of institution, 1971

Instruction and departmental research expenditures	24.6	18.8	26.4	28.0	42.8	44.4
Total capital expenditures	10.0	8.1	8.1	10.2	16.0	25.0
Federally financed capital expenditures	8.8	7.8	12.8	6.4	17.8	30.3

[a]Values were imputed to allow for nonresponse. For example, the imputed dollar volume of separately budgeted R&D expenditures of nonrespondent institutions amounted to $58 million, or 2.7 percent of the $2.1 billion universe total for all universities and colleges, both respondents and nonrespondents.

[b]Includes only those graduate students receiving stipends for part-time services as scientists and engineers.

[c]Not applicable.

Appendix B

Statistical Tables

Universities and colleges (Part I)

Scientific and Engineering Personnel

SCIENTISTS AND ENGINEERS:

B-1. Number of scientists and engineers employed in universities and colleges, by type of institution and employment status, January 1965, 1967, 1969, and 1971 27

B-2. Number of scientists and engineers employed in universities and colleges, by field and employment status, January 1965, 1967, 1969, and 1971 27

B-3. Number of scientists and engineers employed in universities and colleges, by field of employment, January 1965, 1967, 1969, and 1971 28

B-4. Number of scientists and engineers employed in universities and colleges, by function in which primarily employed, type of institution, and field of employment, January 1971 28

B-5. Number of scientists and engineers employed in universities and colleges, by detailed field of employment and type of institution, January 1971 . . . 29

B-6. Number of scientists and engineers employed in universities and colleges, by type of institution, level of educational attainment, and field of employment, January 1971 29

B-7. Number of scientists and engineers employed in universities and colleges, by State, January 1965, 1967, 1969, and 1971 30

B-8. Number of scientists and engineers employed in universities and colleges, by State and field of employment, January 1971 31

B-9. Number of scientists and engineers employed in universities and colleges, by State and level of educational attainment, January 1971 32

B-10. FTE scientists and engineers employed in universities and colleges, by State and function, January 1971 33

GRADUATE STUDENTS:

B-11. Graduate students receiving compensation for part-time services as scientists and engineers in universities and colleges, by field of employment and function, January 1965, 1967, 1969, and 1971 34

B-12. Number of graduate students receiving compensation for part-time services as scientists or engineers in universities and colleges, by function, type of institution, and field, January 1971 34

B-13. Number of graduate students receiving compensation for part-time services as scientists or engineers in universities and colleges, by State, January 1965, 1967, 1969, and 1971 35

Scientific and Engineering Personnel

SCIENTISTS AND ENGINEERS:

B-1. Number of scientists and engineers employed in universities and colleges, by type of institution and employment status, January 1965, 1967, 1969, and 1971 27

B-2. Number of scientists and engineers employed in universities and colleges, by field and employment status, January 1965, 1967, 1969, and 1971 27

B-3. Number of scientists and engineers employed in universities and colleges, by field of employment, January 1965, 1967, 1969, and 1971 28

B-4. Number of scientists and engineers employed in universities and colleges, by function in which primarily employed, type of institution, and field of employment, January 1971 28

B-5. Number of scientists and engineers employed in universities and colleges, by detailed field of employment and type of institution, January 1971 . . . 29

B-6. Number of scientists and engineers employed in universities and colleges, by type of institution, level of educational attainment, and field of employment, January 1971 29

B-7. Number of scientists and engineers employed in universities and colleges, by State, January 1965, 1967, 1969, and 1971 30

B-8. Number of scientists and engineers employed in universities and colleges, by State and field of employment, January 1971 31

B-9. Number of scientists and engineers employed in universities and colleges, by State and level of educational attainment, January 1971 32

B-10. FTE scientists and engineers employed in universities and colleges, by State and function, January 1971 33

GRADUATE STUDENTS:

B-11. Graduate students receiving compensation for part-time services as scientists and engineers in universities and colleges, by field of employment and function, January 1965, 1967, 1969, and 1971 34

B-12. Number of graduate students receiving compensation for part-time services as scientists or engineers in universities and colleges, by function, type of institution, and field, January 1971 34

B-13. Number of graduate students receiving compensation for part-time services as scientists or engineers in universities and colleges, by State, January 1965, 1967, 1969, and 1971 35

B-14. Number of graduate students receiving compensation for part-time services as scientists or engineers in universities and colleges, by State and field, January 1971 36

B-15. Graduate students receiving compensation for part-time services as scientists or engineers in universities and colleges, by State and function, January 1971 37

TECHNICIANS:

B-16. Number of technicians employed in the sciences and engineering in universities and colleges, by function in which primarily employed, field of employment, and type of institution, January 1971 38

B-17. Number of technicians employed in the sciences and engineering in universities and colleges, by State and function in which primarily employed, January 1971 39

Financing of Scientific Activities

Financing of Scientific Activities

B-18. Selected characteristics of current and capital expenditures for research, development, and instruction in the sciences and engineering in universities and colleges, 1964, 1966, 1968, and 1970 40

B-19. Current and capital expenditures for research, development, and instruction in the sciences and engineering in universities and colleges, by type of expenditure and type of control, 1964, 1966, 1968, and 1970 40

B-20. Current and capital expenditures for research and instruction in the sciences and engineering in universities and colleges, by type of expenditure, field of science, and type of control, 1970 41

CURRENT R&D EXPENDITURES:

B-21. Current expenditures for research and development in universities and colleges, by source of funds, 1953-70 41

B-22. Current expenditures for research and development in universities and colleges, by character of work, 1953-70 42

B-23. Current expenditures from universities' and colleges' own funds for separately and nonseparately budgeted R&D, 1953-70 42

B-24. Current expenditures for research and development in universities and colleges, by source of funds and type of institution, 1970 42

B-25. Current expenditures for research and development in universities and colleges, by State and source of funds, 1970 43

B-26. Current expenditures for research and development in universities and colleges, by State, 1964, 1966, 1968, and 1970 44
B-27. Federally financed current expenditures for research and development in universities and colleges, by State, 1964, 1966, 1968, and 1970 45
B-28. Current expenditures for research in universities and colleges, by field of science and source of funds, 1964, 1966, 1968, and 1970 46
B-29. Current expenditures for research in universities and colleges, by field of science, source of funds, and type of institution, 1970 46
B-30. Current expenditures for research in universities and colleges, by State and field of science, 1970 47

CURRENT EXPENDITURES FOR INSTRUCTION:

B-31. Current expenditures for instruction in the sciences and engineering in universities and colleges, by State and field of science, 1970 48
B-32. Current expenditures for instruction in the sciences and engineering in universities and colleges, by field of science and type of institution, 1970 49

CAPITAL EXPENDITURES:

B-33. Capital expenditures for research, development, and instruction in the sciences and engineering in universities and colleges, by type of institution, source of funds, and purpose, 1970 49
B-34. Capital expenditures for research, development, and instruction in the sciences and engineering in universities and colleges, by State, source of funds, and purpose, 1970 50
B-35. Capital expenditures for research, development, and instruction in the sciences and engineering in universities and colleges, by State, and source of funds, 1964, 1966, 1968, and 1970 51
B-36. Capital expenditures for research, development, and instruction in the sciences and engineering in universities and colleges, by field of science and type of institution, 1970 52
B-37. Percent distribution of selected financial, employment, and educational characteristics of scientific and engineering activities of universities and colleges, by institutional group ranked on the basis of R&D expenditures, 1970 52

Table B-1. Number of scientists and engineers employed in univer of institution and employment status, January 1965, 196

Type of institution and employment status	1965	19
Total	178,904	21

[a]Includes estimates for departmental research and for other R&D costs for which most universities and colleges do not maintain separate records.

[b]Excludes development expenditures not requested by field of science.

[c]The term, earth sciences, was used in 1964 and 1966 rather than environmental sciences.

[d]Includes anthropology; economics; history; linguistics; political science, sociology; and social sciences, NEC.

[e]Excludes departmental research expenditures, which are included with current R&D expenditures in this table.

SOURCE: National Science Foundation. Data derived from the 1964, 1966, 1969, and 1971 Surveys of Scientific Activities of Institutions of Higher Education.

First 100	81.0	84.8	75.8	48.5	58.0	63.2	55.8	47.8	42.0	84.1
All other institutions	19.0	15.2	24.3	51.5	42.0	36.8	44.2	52.2	58.0	15.9

[a]Includes an estimated $500 million in departmental research.

[b]Excludes first professional doctorates in medical and health related fields (M.D., D.D.S., etc.)

APPENDIX B

Reproduction of Survey Form

NSF FORM 411, November 1970

OMB No. 99–R0263
Approval expires December 31, 1971

NATIONAL SCIENCE FOUNDATION
Washington, D.C. 20550

SURVEY OF SCIENTIFIC ACTIVITIES OF INSTITUTIONS OF HIGHER EDUCATION, 1971

Organizations are requested to complete and return this form to:

National Science Foundation
Washington, D.C. 20550
Attn: UNISG

Name and address of institution:
(Please correct if name or address has changed)

(Includes aggregate data from 2,198 universities and colleges and 105 medical schools, but excludes 35 university-administered FFRDC's)

The survey questionnaire requests two types of information on the scientific and engineering activities of your institution: Part I, employment of professional and technical personnel, and Part II, current and capital expenditures for research, development, and instruction.

Please read the enclosed instructions before completing this form. Where exact data are not available, estimates are acceptable. Enter "0" as a total rather than leave an item blank.

The data requested in this questionnaire will be published as statistical totals or aggregates for all institutions or for selected groups of institutions. In certain instances, however, the National Science Foundation may wish to publish selected survey data with the institution

Federally Funded Research and Development Centers, as designated by Federal agencies,
Schools of medicine (note that data for medical schools should also be included on form 411)

If your institution has such separately organized units as defined on page 2 of the Instructions and has not received the appropriate forms, these forms will be furnished upon request.

This survey is intended to include institutions in the United States and its outlying areas. Exclude financial and personnel data related specifically to scientific activities carried out by organizational units of the institution located abroad.

Although Form 411 is intended to be used to report data for the institution as a whole, it is

National Science Foundation
Washington, D.C. 20550
Attn: UNISG

(Includes aggregate data from 2,198 universities and colleges and 105 medical schools, but excludes 35 university-administered FFRDC's)

The survey questionnaire requests two types of information on the scientific and engineering activities of your institution: Part I, employment of professional and technical personnel, and Part II, current and capital expenditures for research, development, and instruction.

Please read the enclosed instructions before completing this form. Where exact data are not available, estimates are acceptable. Enter "0" as a total rather than leave an item blank.

The data requested in this questionnaire will be published as statistical totals or aggregates for all institutions or for selected groups of institutions. In certain instances, however, the National Science Foundation may wish to publish selected survey data with the institution identified. Please indicate below the number of any item that should not be published with institutional identification:

_____

In addition to completing this questionnaire for the institution as a whole, a limited number of institutions are requested to report data for certain of their organizational units. Separate blue questionnaires (NSF Form 412) should be used to report data for the following organizational units:

Federally Funded Research and Development Centers, as designated by Federal agencies.
Schools of medicine (note that data for medical schools should also be included on form 411)

If your institution has such separately organized units as defined on page 2 of the Instructions and has not received the appropriate forms, these forms will be furnished upon request.

This survey is intended to include institutions in the United States and its outlying areas. Exclude financial and personnel data related specifically to scientific activities carried out by organizational units of the institution located abroad.

Although Form 411 is intended to be used to report data for the institution as a whole, it is recognized that some institutions may find it convenient to submit separate reports for branches or other organizational units. If your institution prefers to submit separate reports for branches or other organizational units rather than a single report covering the entire institution, list below all branches or other organizational units of your institution which have been excluded from this report and for which separate reports are being submitted:

_____

_____

_____

PART I–PERSONNEL DATA

(Includes items 1 to 6 of the survey questionnaire)

Personnel data are to be reported as of January 1971 or as close as possible thereto.

SECTION A. NUMBER OF SCIENTISTS AND ENGINEERS

(NOTE: Figures on graduate students engaged part time as scientists and engineers should be reported in Section B).

Item 1. **Full-time scientists and engineers, by field and function in which primarily employed; and total full-time equivalents, by function, January 1971**

FIELD OF EMPLOYMENT		TOTAL[a] (1)	TEACHING (2)	R & D (3)	OTHER ACTIVITIES (4)
a. Engineers (total)	0110	23,039	17,662	4,480	897
(1) Aeronautical engineers	0111	1,305	893	379	33
(2) Chemical engineers	0112	1,610	1,253	301	56
(3) Civil engineers	0113	3,484	2,971	407	106
(4) Electrical engineers	0114	5,745	4,311	1,288	146
(5) Mechanical engineers	0115	4,537	3,845	592	100
(6) Other engineers	0116	6,358	4,389	1,513	456
b. Physical scientists (total)	0120	32,098	25,012	6,533	553
(1) Chemists	0121	13,167	10,643	2,315	209
(2) Earth scientists	0122	5,752	4,432	1,185	135
(3) Physicists	0123	11,045	8,697	2,187	161
(4) Other physical scientists	0124	2,134	1,240	846	48
c. Mathematicians (total)	0130	20,282	18,583	1,316	383
d. Life scientists (total)	0140	85,907	46,276	24,409	15,222
(1) Agricultutal scientists	0141	16,334	3,460	5,044	7,830
(2) Biological scientists	0142	27,857	19,897	7,182	778
(3) Medical scientists	0143	41,716	22,919	12,183	6,614
e. Psychologists (total)	0150	12,994	11,149	943	902
f. Social scientists (total)	0160	48,735	42,730	2,855	3,150
(1) Economists	0161	9,507	8,088	1,029	390
(2) Sociologists	0162	8,824	8,160	473	191
(3) Political scientists	0163	7,693	7,161	300	232
(4) Historians	0164	13,639	13,236	233	170
(5) Other social scientists	0165	9,072	6,085	820	2,167
g. Total *(sum of a to f)*	0100	223,055	161,412	40,536	21,107
h. FTE distribution, by function[b]	0190	223,055	155,965	46,158	20,932

a. Engineers (total)	0110	23,039	17,662	4,480	897
(1) Aeronautical engineers	0111	1,305	893	379	33
(2) Chemical engineers	0112	1,610	1,253	301	56
(3) Civil engineers	0113	3,484	2,971	407	106
(4) Electrical engineers	0114	5,745	4,311	1,288	146
(5) Mechanical engineers	0115	4,537	3,845	592	100
(6) Other engineers	0116	6,358	4,389	1,513	456
b. Physical scientists (total)	0120	32,098	25,012	6,533	553
(1) Chemists	0121	13,167	10,643	2,315	209
(2) Earth scientists	0122	5,752	4,432	1,185	135
(3) Physicists	0123	11,045	8,697	2,187	161
(4) Other physical scientists	0124	2,134	1,240	846	48
c. Mathematicians (total)	0130	20,282	18,583	1,316	383
d. Life scientists (total)	0140	85,907	46,276	24,409	15,222
(1) Agricultural scientists	0141	16,334	3,460	5,044	7,830
(2) Biological scientists	0142	27,857	19,897	7,182	778
(3) Medical scientists	0143	41,716	22,919	12,183	6,614
e. Psychologists (total)	0150	12,994	11,149	943	902
f. Social scientists (total)	0160	48,735	42,730	2,855	3,150
(1) Economists	0161	9,507	8,088	1,029	390
(2) Sociologists	0162	8,824	8,160	473	191
(3) Political scientists	0163	7,693	7,161	300	232
(4) Historians	0164	13,639	13,236	233	170
(5) Other social scientists	0165	9,072	6,085	820	2,167
g. Total *(sum of a to f)*	0100	223,055	161,412	40,536	21,107
h. FTE distribution, by function[b]	0190	223,055	155,965	46,158	20,932

Item 2. **Full-time scientists and engineers, by field in which primarily employed and highest earned degree, January 1971**

FIELD OF EMPLOYMENT		TOTAL[a] (1)	PH.D. OR SC.D. (2)	M.D., D.D.S., ETC. (3)	MASTER'S (4)	BACHELOR'S OR THE EQUIVALENT (5)
a. Engineers	0210	23,039	12,098	52	7,374	3,515
b. Physical scientists	0220	32,098	22,511	111	7,611	1,865
c. Mathematicians	0230	20,282	9,486	51	9,672	1,073
d. Life scientists	0240	85,907	31,601	29,866	14,156	10,284
e. Psychologists	0250	12,994	8,827	120	3,652	395
f. Social scientists	0260	48,735	26,352	258	19,841	2,284
g. Total *(sum of a to f)*	0200	223,055	110,875	30,458	62,306	19,416

[a] Totals in items 1a to 1g, column 1, *should be the same* as the corresponding totals in items 2a to 2g, column 1.

[b] The total reported in item 1h, column 1, should, by definition, be the same as the total in item 1g, column 1. However, the FTE distribution by function (columns 2, 3, and 4) will not necessarily coincide with the functional distribution on a "primarily employed" basis in item 1g.

Item 3. Part-time scientists and engineers, by field and function in which primarily employed; and total full-time equivalents, by function, January 1971. (Exclude graduate students here but report them in Section B)

FIELD OF EMPLOYMENT		TOTAL[a] (1)	TEACHING (2)	R & D (3)	OTHER ACTIVITIES (4)
a. Engineers (total)	0310	4,091	3,656	359	76
(1) Aeronautical engineers	0311	164	124	39	1
(2) Chemical engineers	0312	233	200	30	3
(3) Civil engineers	0313	645	589	33	23

e. Social science technicians	0650	1,559	906	653
f. Total *(sum of a to e)*	0600	46,013	31,909	14,104

PART II—FINANCIAL DATA

(Includes items 7 to 13 of the survey questionnaire)

FINANCIAL DATA REPORTED IN PART II ARE FOR THE FISCAL YEAR, WHICH BEGAN ON JULY 1, 1969 AND ENDED ON JUNE 30, 1970, OR YOUR INSTITUTION'S EQUIVALENT FISCAL YEAR. SPECIFY THE ENDING DATE IF DIFFERENT FROM ABOVE:

_____

ALL FINANCIAL DATA REQUESTED ON THIS FORM SHOULD BE REPORTED IN THOUSANDS OF DOLLARS; FOR EXAMPLE, AN EXPENDITURE OF $25,342 SHOULD BE ROUNDED TO THE NEAREST THOUSAND DOLLARS AND REPORTED IN THE APPROPRIATE COLUMNS AS $25.

_____

*The numbers within parentheses in items 7 through 10 include an estimate for departmental research and other R&D costs for which most universities and colleges do not maintain separate records. The numbers outside the parentheses represent separately-budgeted R&D expenditures as reported by institutions included in the survey. All charts and appendix tables include estimates for nonseparately budgeted R&D expenditures.

*In item 11 the numbers within parentheses represent both [illegible]

ALL FINANCIAL DATA REQUESTED ON THIS FORM SHOULD BE REPORTED IN THOUSANDS OF DOLLARS; FOR EXAMPLE, AN EXPENDITURE OF $25,342 SHOULD BE ROUNDED TO THE NEAREST THOUSAND DOLLARS AND REPORTED IN THE APPROPRIATE COLUMNS AS $25.

*The numbers within parentheses in items 7 through 10 include an estimate for departmental research and other R&D costs for which most universities and colleges do not maintain separate records. The numbers outside the parentheses represent separately-budgeted R&D expenditures as reported by institutions included in the survey. All charts and appendix tables include estimates for nonseparately budgeted R&D expenditures.

*In item 11 the numbers within parentheses represent both direct and indirect costs for instruction. These numbers exclude estimates for departmental research but include indirect costs in item 12 associated with instruction. The numbers outside the parentheses represent total direct expenditures for instruction and departmental research as reported by survey respondents. All charts and appendix tables represent total instruction expenditures.

SECTION D
CURRENT EXPENDITURES FOR SEPARATELY BUDGETED RESEARCH AND DEVELOPMENT (R&D)

If your institution did not have any current expenditures for separately budgeted research and development in 1969-70 check "none" in the space provided here and skip to Section E. ☐ None.

(Exclude expenditures for capital equipment and facilities.)

Item 7. Current expenditures for separately budgeted research and development, by source of funds, 1969-70

SOURCE OF FUNDS		THOUSANDS OF DOLLARS	INTERNAL USE ONLY
a. Federal Government	0710	$ 1,658,298	equals 8d and 9d (Col. 2)
b. State government	0720	261,010	
c. Local government	0730	11,931	
d. Foundations	0740	75,809	
e. Voluntary health agencies	0750	30,067	
f. Industry	0760	61,633	
g. Institution's own funds	0770	197,092 (696,747)*	
h. Other sources	0780	54,932	
i. Total *(sum of a to h)*	0700	$ 2,350,772 (2,856,427)*	equals 8d and 9d (Col. 1)

Item 8. Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1969-70.

COST ITEM		THOUSANDS OF DOLLARS	
		TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	0810	$ 1,297,438 (1,597,013)*	$ 870,445
b. All other direct costs (including materials and supplies)	0820	728,477 (778,511)*	512,632
c. Indirect costs reimbursed or reimbursable	0830	330,857 (480,903)*	275,221
d. Total *(sum of a to c)*	0800	$ 2,356,772 (2,856,427)*	$ 1,658,298

Item 9. Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1969-70.

TYPE OF R&D ACTIVITY		THOUSANDS OF DOLLARS	
		TOTAL	FEDERAL GOVERNMENT

d. Foundations	0760	72,602		
e. Voluntary health agencies	0780	30,067		
f. Industry	0790	61,633		
g. Institution's own funds	0770	177,092 (696,747)*		
h. Other sources	0792	54,932		
i. Total (sum of a to h)*	0700	$ 2,356,772 (2,856,427)*	equals 8d and 9d (Col. 1)	

Item 8. Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1969-70.

COST ITEM		THOUSANDS OF DOLLARS	
		TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	0810	$ 1,297,438 (1,597,013)*	$ 870,445
b. All other direct costs including materials and supplies	0820	728,477 (778,511)*	512,632
c. Indirect costs reimbursed or reimbursable	0830	330,857 (480,903)*	275,221
d. Total (sum of a to c)*	0800	$ 2,356,772 (2,856,427)*	$ 1,658,298

Item 9. Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1969-70.

TYPE OF R&D ACTIVITY		THOUSANDS OF DOLLARS	
		TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Basic research	0910	$ 1,787,806 (2,185,657)*	$ 1,288,630
b. Applied research	0920	424,772 (526,576)*	266,083
c. Development	0930	144,194	103,585
d. Total (sum of a to c)*	0900	$ 2,356,772 (2,856,427)*	$ 1,658,298

*Totals in items 7i, 8d (Col. 1) and 9d (Col. 1) should be identical. Similarly, figures reported in items 7a, 8d (Col. 2) and 9d (Col. 2) should be identical. If figures for the foregoing items are not consistent, please give reasons in "Remarks" at the end of the questionnaire.

Item 10. **Total and federally financed current expenditures for separately budgeted basic and applied research, by field of science, 1969-70**

FIELD OF SCIENCE		THOUSANDS OF DOLLARS	
		TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Engineering (total)	1010	$ 279,726 (346,427)	$ 212,538
b. Physical sciences (total)	1020	$ 315,181 (308,789)	$ 204,649
(1) Astronomy	1021	17,027 (19,681)	14,612
(2) Chemistry	1022	101,037 (114,578)	78,649

Item 12. **Estimate the dollar amount of overhead or indirect costs allocable to the instruction and departmental research activities reported above (item 11)**

		THOUSANDS OF DOLLARS
	1200	$ 1,216,963

SECTION F

CAPITAL EXPENDITURES FOR SCIENTIFIC AND ENGINEERING FACILITIES AND EQUIPMENT FOR RESEARCH, DEVELOPMENT, AND INSTRUCTION

Item 13. Capital expenditures for scientific and engineering facilities and equipment for research, development, and instruction, by field of science, source of funds, and purpose, 1969-70.

Prorate any expenditures intended for use in two or more fields of science and for R&D and graduate and undergraduate instruction. Do not include any materials and supplies reported under current expenditures in Section D or Section E. Include current fund expenditures for equipment and facilities as well as plant and other funds.

	FIELD OF SCIENCE		SOURCE OF FUNDS (THOUSANDS OF DOLLARS)

Appendix C

Statistical Tables

Medical Schools

C-1. Selected employment characteristics of scientists in medical schools, 1965-71 62

C-2. Number of scientists employed in medical schools, by geographic division, 1965, 1967, 1969, and 1971 62

C-3. Selected characteristics of graduate students receiving compensation for part-time services as scientists in medical schools, by field and function, January 1965, 1967, 1969, and 1971 63

C-4. Number of technicians employed in medical schools, by field and function, January 1965, 1967, 1969, and 1971 63

C-5. Current R&D expenditures in medical schools, 1964, 1966, 1968, and 1970 64

List of Medical Schools Included in Survey

ALABAMA: University of Alabama Medical Center.

ARIZONA: University of Arizona College of Medicine.

ARKANSAS: University of Arkansas Medical Center.

CALIFORNIA:
- Loma Linda University School of Medicine.
- Stanford University School of Medicine.
- University of California School of Medicine (Davis).
- University of California College of Medicine (Irvine).
- University of California School of Medicine (San Diego).
- University of California School of Medicine (Los Angeles).
- University of California School of Medicine (San Francisco).
- University of Southern California School of Medicine.

COLORADO: University of Colorado Medical Center.

CONNECTICUT:
- University of Connecticut Health Center.
- Yale University School of Medicine.

DISTRICT OF COLUMBIA:
- Georgetown University School of Medicine.
- George Washington University School of Medicine.
- Howard University College of Medicine.

FLORIDA:
- University of Florida College of Medicine.
- University of Miami School of Medicine.
- University of South Florida College of Medicine.

GEORGIA:
- Emory University School of Medicine.
- Medical College of Georgia.

HAWAII: University of Hawaii School of Medicine.

ILLINOIS:
- Chicago Medical School.
- Loyola University, Stritch School of Medicine.
- Northwestern University Medical School.
- University of Chicago, Pritzker School of Medicine.
- University of Illinois Medical Center.

INDIANA: Indiana University School of Medicine.

IOWA: University of Iowa College of Medicine.

KANSAS: University of Kansas Medical Center.

KENTUCKY:
- University of Kentucky College of Medicine.
- University of Louisville School of Medicine.

LOUISIANA:
- Louisiana State University Medical Center (New Orleans).
- Tulane University School of Medicine.

MARYLAND:
- Johns Hopkins University School of Medicine.
- University of Maryland School of Medicine.

MASSACHUSET
- Boston Univ
- Harvard Medi
- Tufts Univers

- Wayne State University School of Medicine.

MINNESOTA: University of Minnesota Medical School.

MISSISSIPPI: University of Mississippi School of Medicine.

MISSOURI:
- St. Louis University School of Medicine.
- University of Missouri Medical Center (Columbia).
- University of Missouri School of Medicine (Kansas City).
- Washington University School of Medicine.

NEBRASKA:
- Creighton University School of Medicine.
- University of Nebraska Medical Center.

NEW HAMPSHIRE: Dartmouth Medical School.

NEW JERSEY:
- New Jersey College of Medicine and Dentistry.
- Rutgers - the State University Medical School.

NEW MEXICO: University of New Mexico School of Medicine.

NEW YORK:
- CUNY - Mt. Sinai School of Medicine.
- Columbia University, College of Physicians and Surgeons.
- Cornell University Medical College.
- New York Medical College.
- New York University Medical Center.
- SUNY - Downstate Medical Center.
- SUNY - Stony Brook School of Medicine.
- SUNY - Upstate Medical Center.
- Albany Medical College of Union University.
- SUNY - Buffalo School of Medicine.
- University of Rochester School of Medicine and Dentistry.
- Yeshiva University, Albert Einstein College of Medicine.

NORTH CAROLINA:
- Duke University School of Medicine.
- University of North Carolina School of Medicine.
- Wake Forest College, Bowman Gray School of Medicine.

NORTH DAKOTA: University of North Dakota School of Medicine.

OHIO:
- Case-Western Reserve University School of Medicine.
- Medical College of Ohio.
- Ohio State University College of Medicine.
- University of Cincinnati College of Medicine.

OKLAHOMA: University of Oklahoma Medical Center.

OREGON: University of Oregon Medical School.

PENNSYLVANIA:
- Hahnemann Medical College of Philadelphia.
- Thomas Jefferson University and Hospital.
- Pennsylvania State University, Milton S. Hershey Medical Center.
- Temple University School of Medicine.
- University of Pennsylvania School of Medicine.
- University of Pittsburgh School of Medicine.
- The Medical College of Pennsylvania.

RHODE ISLAND: Brown University, Program in Medical Science.

SOUTH CAROLINA: Medical University of South Carolina.

SOUTH DAKOTA: University of South Dakota School of Medicine.

TENNESSEE:
- Meharry Medical College.
- University of Tennessee College of Medicine.
- Vanderbilt University School of Medicine.

TEXAS:
- Baylor College of Medicine.
- University of Texas, M. D. Anderson Hospital and Tumor Institute.
- University of Texas Medical School (San Antonio).
- University of Texas, Southwestern Medical School (Dallas).
- University of Texas Medical Branch (Galveston).
- University of Texas Medical School (Houston)

UTAH: University of Utah College of Medicine.

VERMONT: University of Vermont College of Medicine.

VIRGINIA:
- Virginia Commonwealth University Medical College
- University of Virginia School of Medicine.

WASHINGTON: University of Washington School of Medicine.

WEST VIRGINIA: West Virginia University School of Medicine.

WISCONSIN:
- Medical College of Wisconsin.
- University of Wisconsin Medical School.

PUERTO RICO: University of Puerto Rico, Medical Sciences Campus

Table C-1. Selected employment characteristics of scien

Item	January 1965		January 1	
	Number	Percent distribution	Number	Pe distr
Number of scientists	38,394	100.0	43,808	1
Employment status:				
Full time	25,552	66.6	30,332

APPENDIX C

Reproduction of Survey Form

NSF FORM 412, November 1970

OMB No. 99-R0263
Approval expires December 31, 1971

NATIONAL SCIENCE FOUNDATION
Washington, D.C. 20550

SURVEY OF SCIENTIFIC ACTIVITIES OF INSTITUTIONS OF HIGHER EDUCATION, 1971

Organizations are requested to complete and return this form to:

National Science Foundation
Washington, D.C. 20550
Attn: UNISG

Organizational Unit:
(Please correct if name or address has changed)

(Aggregate data from 105 medical schools)

The blue questionnaire is to be used to report data for the organizational unit designated in the box at upper right. The questionnaire requests two types of information on the scientific activities of the designated organizational unit: Part I, employment of professional and technical personnel, and Part II, current and capital expenditures for research, development, and instruction. List below the names of any research institutes, laboratories, bureaus, hospitals, or foundations included in the organizational unit covered in this report:

_____

Organizations are requested to complete and return this form to:

National Science Foundation
Washington, D.C. 20550
Attn: UNISG

Organizational Unit:
(Please correct if name or address has changed)

(Aggregate data from 105 medical schools)

The blue questionnaire is to be used to report data for the organizational unit designated in the box at upper right. The questionnaire requests two types of information on the scientific activities of the designated organizational unit: Part I, employment of professional and technical personnel, and Part II, current and capital expenditures for research, development, and instruction. List below the names of any research institutes, laboratories, bureaus, hospitals, or foundations included in the organizational unit covered in this report:

Please read the enclosed instructions before completing this form. Where exact data are not available, estimates are acceptable. Enter "0" as a total rather than leave an item blank.

The data requested in this questionnaire will be published as statistical totals or aggregates for all institutions or for selected groups of institutions. In certain instances, however, the National Science Foundation may wish to publish selected survey data with the institution identified. Please indicate below the number of any item that should not be published with institutional identification:

PART I–PERSONNEL DATA

(Includes items 1 to 6 of the survey questionnaire)

Personnel data are to be reported as of January 1971 or as close as possible thereto.

SECTION A. NUMBER OF SCIENTISTS AND ENGINEERS

(NOTE: Figures on graduate students engaged part time as scientists and engineers should be reported in Section B).

Item 1. Full-time scientists and engineers, by field and function in which primarily employed; and total full-time equivalents, by function, January 1971

FIELD OF EMPLOYMENT		TOTAL* (1)	TEACHING (2)	R & D (3)	OTHER ACTIVITIES (4)
a. Engineers (total)	0110	74	7	56	11
(1) Aeronautical engineers	0111	-	-	-	-
(2) Chemical engineers	0112	6	1	5	-
(3) Civil engineers	0113	1	-	-	1
(4) Electrical engineers	0114	39	1	33	5
(5) Mechanical engineers	0115	2	-	1	1
(6) Other engineers	0116	26	5	17	4
b. Physical scientists (total)	0120	237	67	164	6
(1) Chemists	0121	172	48	123	1
(2) Earth scientists	0122	-	-	-	-
(3) Physicists	0123	54	8	41	5
(4) Other physical scientists	0124	11	11	-	-
c. Mathematicians (total)	0130	44	11	30	3
d. Life scientists (total)	0140	38,967	19,443	13,587	5,937
(1) Agricultural scientists	0141	1	-	-	1
(2) Biological scientists	0142	7,336	3,799	3,277	260
(3) Medical scientists	0143	31,630	15,644	10,310	5,676

(5) Other social scientists	0165	97	27	27	43
g. Total *(sum of a to f)*	0100	39,831	19,758	13,993	6,080
h. FTE distribution, by function[b]	0190	39,831	18,975	14,476	6,380

Item 2. Full-time scientists and engineers, by field in which primarily employed and highest earned degree, January 1971

FIELD OF EMPLOYMENT		TOTAL[a] (1)	PH.D. OR SC.D. (2)	M.D., D.D.S., ETC. (3)	MASTER'S (4)	BACHELOR'S OR THE EQUIVALENT (5)
a. Engineers	0210	74	12	-	32	30
b. Physical scientists	0220	237	123	26	29	59
c. Mathematicians	0230	44	24	-	12	8
d. Life scientists	0240	38,967	8,938	25,239	2,315	2,475
e. Psychologists	0250	294	181	62	37	14
f. Social scientists	0260	215	69	53	75	18
g. Total *(sum of a to f)*	0200	39,831	9,347	25,380	2,500	2,604

[a]Totals in items 1a to 1g, column 1, *should be the same* as the corresponding totals in items 2a to 2g, column 1.

[b]The total reported in item 1h, column 1, should, by definition, be the same as the total in item 1g, column 1. However, the FTE distribution by function (columns 2, 3, and 4) will not necessarily coincide with the functional distribution on a "primarily employed" basis in item 1g.

Item 3. Part-time scientists and engineers, by field and function in which primarily employed; and total full-time equivalents, by function, January 1971. (Exclude graduate students here but report them in Section B)

FIELD OF EMPLOYMENT		TOTAL[a] (1)	TEACHING (2)	R & D (3)	OTHER ACTIVITIES (4)
a. Engineers (total)	0310	6	1	5	-
(1) Aeronautical engineers	0311	-	-	-	-

f. Total *(sum of a to e)*	0600	21,350	15,324	6,026

PART II—FINANCIAL DATA

(Includes items 7 to 13 of the survey questionnaire)

FINANCIAL DATA REPORTED IN PART II ARE FOR THE FISCAL YEAR, WHICH BEGAN ON JULY 1, 1969 AND ENDED ON JUNE 30, 1970, OR YOUR INSTITUTION'S EQUIVALENT FISCAL YEAR. SPECIFY THE ENDING DATE IF DIFFERENT FROM ABOVE:

ALL FINANCIAL DATA REQUESTED ON THIS FORM SHOULD BE REPORTED IN THOUSANDS OF DOLLARS; FOR EXAMPLE, AN EXPENDITURE OF $25,342 SHOULD BE ROUNDED TO THE NEAREST THOUSAND DOLLARS AND REPORTED IN THE APPROPRIATE COLUMNS AS $25.

---

*The numbers within parentheses in items 7 through 10 include an estimate for departmental research and other R&D costs for which most universities and colleges do not maintain separate records. The numbers outside the parentheses represent separately-budgeted R&D expenditures as reported by institutions included in the survey. All charts and appendix tables include estimates for nonseparately budgeted R&D expenditures.

*In item 11 the numbers within parentheses represent both direct and

ALL FINANCIAL DATA REQUESTED ON THIS FORM SHOULD BE REPORTED IN THOUSANDS OF DOLLARS; FOR EXAMPLE, AN EXPENDITURE OF $25,342 SHOULD BE ROUNDED TO THE NEAREST THOUSAND DOLLARS AND REPORTED IN THE APPROPRIATE COLUMNS AS $25.

*The numbers within parentheses in items 7 through 10 include an estimate for departmental research and other R&D costs for which most universities and colleges do not maintain separate records. The numbers outside the parentheses represent separately-budgeted R&D expenditures as reported by institutions included in the survey. All charts and appendix tables include estimates for nonseparately budgeted R&D expenditures.

*In item 11 the numbers within parentheses represent both direct and indirect costs for instruction. These numbers exclude estimates for departmental research but include indirect costs in item 12 associated with instruction. The numbers outside the parentheses represent total direct expenditures for instruction and departmental research as reported by survey respondents. All charts and appendix tables represent total instruction expenditures.

SECTION D

CURRENT EXPENDITURES FOR SEPARATELY BUDGETED RESEARCH AND DEVELOPMENT (R&D)

If your institution did not have any current expenditures for separately budgeted research and development in 1969-70 check "none" in the space provided here and skip to Section E. ☐ None.

(Exclude expenditures for capital equipment and facilities.)

Item 7. **Current expenditures for separately budgeted research and development, by source of funds, 1969-70**

SOURCE OF FUNDS		THOUSANDS OF DOLLARS	INTERNAL USE ONLY
a. Federal Government	0710	$ 502,783	equals 8d and 9d (Col. 2)
b. State government	0720	17,578	
c. Local government	0730	7,114	
d. Foundations	0740	25,620	
e. Voluntary health agencies	0750	24,389	
f. Industry	0760	13,618	
g. Institution's own funds	0770	23,167 (153,356)*	
h. Other sources	0780	18,891	
i. Total *(sum of a to h)**	0700	$ 633,160 (763,349)*	equals 8d and 9d (Col. 1)

Item 8. **Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1969-70.**

COST ITEM		THOUSANDS OF DOLLARS	
		TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	0810	$338,673 (416,780)*	$ 267,552
b. All other direct costs (including materials and supplies)	0820	201,582 (214,604)*	156,309
c. Indirect costs reimbursed or reimbursable	0830	92,905 (131,965)*	78,922
d. Total *(sum of a to c)**	0800	$ 633,160 (763,349)*	$ 502,783

Item 9. **Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1969-70.**

	THOUSANDS OF DOLLARS

c. Local government	0730	7,114		
d. Foundations	0740	25,620		
e. Voluntary health agencies	0750	24,389

Item 12. **Estimate the dollar amount of overhead or indirect costs allocable to the instruction and departmental research activities reported above (item 11)**

1200 — THOUSANDS OF DOLLARS: $ 165,763

SECTION F
CAPITAL EXPENDITURES FOR SCIENTIFIC AND ENGINEERING FACILITIES AND EQUIPMENT FOR RESEARCH, DEVELOPMENT, AND INSTRUCTION

Item 13. **Capital expenditures for scientific and engineering facilities and equipment for research, development, and instruction, by field of science, source of funds, and purpose, 1969-70.**

Prorate any expenditures intended for use in two or more fields of science and for R&D and graduate and undergraduate instruction. Do not include any materials and supplies reported under current expenditures in Section D or Section E. Include current fund expenditures for equipment and facilities as well as plant and other funds.

	FIELD OF SCIENCE		SOURCE OF FUNDS (THOUSANDS OF DOLLARS)

Statistical Tables

University-Administered Federally Funded Research and Development Centers (Part II)

D-1. Selected employment characteristics of scientific activities in university-administered FFRDC's, January 1971 75

D-2. Number of scientists and engineers employed in university-administered Federally Funded Research and Development Centers, by field of employment, 1965, 1967, 1969, and 1971 75

D-3. Current R&D expenditures in university-administered FFRDC's by character of work, 1955-70 76

D-4. Selected financial characteristics of scientific activities in university-administered FFRDC's, 1970 76

List of Federally Funded Research and D
Administered by Universities and Unive

DEPARTMENT OF DEFENSE

Department of the Army

Army Mathematics Center (University of Wisconsin)
Center for Research in Social Systems (American University)

Department of the Navy

Applied Physics Laboratory (Johns Hopkins University)
Applied Physics Laboratory (University of Washington)
Center for Naval Analyses (University of Rochester)
Ordnance Research Laboratory (Pennsylvania State University)

Department of the Air Force

Lincoln Laboratory (Massachusetts Institute of Technology)

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Office of Education

Center for the Advanced Study of Educational Administration (University of Oregon)
Center for Research and Development in Higher Education (University of California)
Center for Research and Development for Learning and Realization (University of Wisconsin)
Center for the Study of the Evaluation of Instructional Programs (University of California)
Center for the Study of Social Organization of Schools and the Learning Process (Johns Hopkins University)
Coordination Center for the National Program in Early Childhood Education (University of Illinois)
Learning Research and Development Center (University of Pittsburgh)
Research and Development Center in Educational Stimulation (University of Georgia)
Research and Development Center in Teacher Education (University of Texas)
Stanford Center for Research and Development in Teaching (Stanford University)

[1] All of the organizations listed here were designated by the Federal Council for Science and Technology to be FFRDC's in academic year 1969-70.

List of Federally Funded Research and Development Centers Administered by Universities and University Consortia[1]

DEPARTMENT OF DEFENSE

Department of the Army

Army Mathematics Center (University of Wisconsin).
Center for Research in Social Systems (American University).

Department of the Navy

Applied Physics Laboratory (Johns Hopkins University).
Applied Physics Laboratory (University of Washington).
Center for Naval Analyses (University of Rochester).
Ordnance Research Laboratory (Pennsylvania State University).

Department of the Air Force

Lincoln Laboratory (Massachusetts Institute of Technology).

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Office of Education

Center for the Advanced Study of Educational Administration (University of Oregon).
Center for Research and Development in Higher Education (University of California).
Center for Research and Development for Learning and Reeducation (University of Wisconsin).
Center for the Study of the Evaluation of Instructional Programs (University of California).
Center for the Study of Social Organization of Schools and the Learning Process (Johns Hopkins University).
Coordination Center for the National Program in Early Childhood Education (University of Illinois).
Learning Research and Development Center (University of Pittsburgh).
Research and Development Center in Educational Stimulation (University of Georgia).
Research and Development Center in Teacher Education (University of Texas).
Stanford Center for Research and Development in Teaching (Stanford University).

ATOMIC ENERGY COMMISSION

Ames Laboratory (Iowa State University of Science and Technology).
Argonne National Laboratory (University of Chicago and Argonne Universities Association).
Brookhaven National Laboratory (Associated Universities, Inc.).
Cambridge Electron Accelerator (Harvard University and Massachusetts Institute of Technology).
Lawrence Radiation Laboratory, Berkeley and Livermore (University of California).
Los Alamos Scientific Laboratory (University of California).
National Accelerator Laboratory (Universities Research Association).
Oak Ridge Associated Universities.
Plasma Physics Laboratory (Princeton University).
Princeton-Pennsylvania Accelerator (Princeton University and University of Pennsylvania).
Stanford Linear Accelerator Center (Stanford University).

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Jet Propulsion Laboratory (California Institute of Technology).
Space Radiation Effects Laboratory (College of William and Mary).

NATIONAL SCIENCE FOUNDATION

Arecibo Observatory (Cornell University).
Cerro Tololo Inter-American Observatory (Association of Universities for Research in Astronomy, Inc.).
Kitt Peak National Observatory (Association of Universities for Research in Astronomy, Inc.).
National Center for Atmospheric Research (University Corporation for Atmospheric Research).
National Radio Astronomy Observatory (Associated Universities, Inc.).

[1] All of the organizations listed here were designated by the Federal Council for Science and Technology as the FFRDC's in academic year 1969-70.

The institutions comprising the membership of the managing consortia are as follows:

Associated Universities, Inc.

- Columbia University
- Cornell University
- Harvard University
- Johns Hopkins University
- Massachusetts Institute of Technology
- University of Pennsylvania
- Princeton University
- University of Rochester
- Yale University

Association of Universities for Research in Astronomy, Inc.

- University of California
- University of Chicago
- Harvard University
- Indiana University
- University of Michigan
- Ohio State University
- Princeton University
- University of Texas
- University of Wisconsin
- Yale University

University Corporation for Atmospheric Research

- University of Alaska
- University of Arizona
- University of California
- Catholic University of America
- University of Chicago
- Colorado State University
- University of Colorado
- Cornell University
- University of Denver
- Florida State University
- University of Hawaii
- Johns Hopkins University

Reproduction of Survey Form

NSF FORM 412, November 1970

OMB No. 99-R0263
Approval expires December 31, 1971

NATIONAL SCIENCE FOUNDATION
Washington, D.C. 20550

SURVEY OF SCIENTIFIC ACTIVITIES OF INSTITUTIONS OF HIGHER EDUCATION, 1971

Organizations are requested to complete and return this form to:

National Science Foundation
Washington, D.C. 20550
Attn: UNISG

Organizational Unit:
(Please correct if name or address has changed)

(Aggregate data from 35 university-administered FFRDC's)

The blue questionnaire is to be used to report data for the organizational unit designated in the box at upper right. The questionnaire requests two types of information on the scientific activities of the designated organizational unit: Part I, employment of professional and technical personnel, and Part II, current and capital expenditures for research, development, and instruction. List below the names of any research institutes, laboratories, bureaus, hospitals, or foundations included in the organizational unit covered in this report:

Organizations are requested to complete and return this form to:

National Science Foundation
Washington, D.C. 20550
Attn: UNISG

Organizational Unit:
(Please correct if name or address has changed)

(Aggregate data from 35 university-administered FFRDC's)

The blue questionnaire is to be used to report data for the organizational unit designated in the box at upper right. The questionnaire requests two types of information on the scientific activities of the designated organizational unit: Part I, employment of professional and technical personnel, and Part II, current and capital expenditures for research, development, and instruction. List below the names of any research institutes, laboratories, bureaus, hospitals, or foundations included in the organizational unit covered in this report:

Please read the enclosed instructions before completing this form. Where exact data are not available, estimates are acceptable. Enter "0" as a total rather than leave an item blank.

The data requested in this questionnaire will be published as statistical totals or aggregates for all institutions or for selected groups of institutions. In certain instances, however, the National Science Foundation may wish to publish selected survey data with the institution identified. Please indicate below the number of any item that should not be published with institutional identification:

PART I—PERSONNEL DATA

(Includes items 1 to 6 of the survey questionnaire)

Personnel data are to be reported as of January 1971 or as close as possible thereto.

SECTION A. NUMBER OF SCIENTISTS AND ENGINEERS

(NOTE: Figures on graduate students engaged part time as scientists and engineers should be reported in Section B).

Item 1. Full-time scientists and engineers, by field and function in which primarily employed; and total full-time equivalents, by function, January 1971

FIELD OF EMPLOYMENT		TOTAL* (1)	TEACHING (2)	R & D (3)	OTHER ACTIVITIES (4)
a. Engineers (total)	0110	5,093	-	5,001	92
(1) Aeronautical engineers	0111	172	-	171	1
(2) Chemical engineers	0112	242	-	235	7
(3) Civil engineers	0113	149	-	145	4
(4) Electrical engineers	0114	2,226	-	2,201	25
(5) Mechanical engineers	0115	1,325	-	1,308	17
(6) Other engineers	0116	979	-	941	38
b. Physical scientists (total)	0120	4,181	-	4,107	74
(1) Chemists	0121	1,163	-	1,135	28
(2) Earth scientists	0122	22	-	22	-
(3) Physicists	0123	2,524	-	2,501	23
(4) Other physical scientists	0124	472	-	449	23
c. Mathematicians (total)	0130	1,059	-	1,052	7
d. Life scientists (total)	0140	359	-	352	7
(1) Agricultural scientists	0141	-	-	-	-
(2) Biological scientists	0142	287	-	280	7

(1) Chemists	0121	1,163	-	1,135	28
(2) Earth scientists	0122	22	-	22	-
(3) Physicists	0123	2,524	-	2,501	23
(4) Other physical scientists	0124	472	-	449	23
c. Mathematicians (total)	0130	1,059	-	1,052	7
d. Life scientists (total)	0140	359	-	352	7
(1) Agricultural scientists	0141	-	-	-	-
(2) Biological scientists	0142	287	-	280	7
(3) Medical scientists	0143	72	-	72	-
e. Psychologists (total)	0150	57	-	55	2
f. Social scientists (total)	0160	269	-	268	1
(1) Economists	0161	39	-	39	-
(2) Sociologists	0162	24	-	23	1
(3) Political scientists	0163	13	-	13	-
(4) Historians	0164	9	-	9	-
(5) Other social scientists	0165	184	-	184	-
g. Total *(sum of a to f)*	0100	11,018	-	10,835	183
h. FTE distribution, by function[b]	0190	11,018	-	10,831	187

Item 2. Full-time scientists and engineers, by field in which primarily employed and highest earned degree, January 1971

FIELD OF EMPLOYMENT		TOTAL[a] (1)	PH.D. OR SC.D. (2)	M.D., D.D.S., ETC. (3)	MASTER'S (4)	BACHELOR'S OR THE EQUIVALENT (5)
a. Engineers	0210	5,093	603	-	1,602	2,892
b. Physical scientists	0220	4,181	2,569	1	671	940
c. Mathematicians	0230	1,059	139	1	341	578
d. Life scientists	0240	359	160	43	62	94
e. Psychologists	0250	57	35	-	10	12
f. Social scientists	0260	269	76	2	114	77
g. Total *(sum of a to f)*	0200	11,018	3,582	47	2,800	4,593

[a]Totals in items 1a to 1g, column 1, *should be the same* as the corresponding totals in items 2a to 2g, column 1.

[b]The total reported in item 1h, column 1, should, by definition, be the same as the total in item 1g, column 1. However, the FTE distribution by function (columns 2, 3, and 4) will not necessarily coincide with the functional distribution on a "primarily employed" basis in item 1g.

Item 3. Part-time scientists and engineers, by field and function in which primarily employed; and total full-time equivalents, by function, January 1971. (Exclude graduate students here but report them in Section B)

FIELD OF EMPLOYMENT		TOTAL* (1)	TEACHING (2)	R & D (3)	OTHER ACTIVITIES (4)
a. Engineers (total)	0310	34	-	33	1
(1) Aeronautical engineers	0311	-	-	-	-
(2) Chemical engineers	0312	2	-	2	-
(3) Civil engineers	0313	-	-	-	-
(4) Electrical engineers	0314	13	-	13	-
(5) Mechanical engineers	0315	11	-	11	-
(6) Other engineers	0316	8	-	7	1
b. Physical scientists (total)	0320	141	-	141	-
(1) Chemists	0321	40	-	40	-
(2) Earth scientists	0322	1	-	1	-
(3) Physicists	0323	88	-	88	-
(4) Other physical scientists	0324	12	-	12	-
c. Mathematicians (total)	0330	31	-	31	-
d. Life scientists (total)	0340	24	-	24	-
(1) Agricultural scientists	0341	-	-	-	-
(2) Biological scientists	0342	19	-	19	-
(3) Medical scientists	0343	5	-	5	-
e. Psychologists (total)	0350	37	-	36	1
f. Social scientists (total)	0360	54	-	51	3
(1) Economists	0361	2	-	2	-
(2) Sociologists	0362	10	-	9	1
(3) Political scientists	0363	-	-	-	-
(4) Historians	0364	1	-	1	-
(5) Other social scientists	0365	41	-	39	2
g. Total (sum of a to f)	0300	321	-	316	5
h. FTE distribution, by function[2]	0390	148	-	144	4

Item 4. Part-time scientists and engineers, by field in which primarily employed and highest earned degree, January 1971.

FIELD OF EMPLOYMENT	TOTAL*	PH.D. OR	M.D., D.D.S.	MASTER'S	BACHELOR'S OR THE

(5) Mechanical engineers	0315	11	-	11	-
(6) Other engineers	0316	8	-	7	1
b. Physical scientists (total)	0320	141	-	141	-
(1) Chemists	0321	40	-	40	-
(2) Earth scientists	0322	1	-	1	-
(3) Physicists	0323	88	-	88	-
(4) Other physical scientists	0324	12	-	12	-
c. Mathematicians (total)	0330	31	-	31	-
d. Life scientists (total)	0340	24	-	24	-
(1) Agricultural scientists	0341	-	-	-	-
(2) Biological scientists	0342	19	-	19	-
(3) Medical scientists	0343	5	-	5	-
e. Psychologists (total)	0350	37	-	36	1
f. Social scientists (total)	0360	54	-	51	3
(1) Economists	0361	2	-	2	-
(2) Sociologists	0362	10	-	9	1
(3) Political scientists	0363	-	-	-	-
(4) Historians	0364	1	-	1	-
(5) Other social scientists	0365	41	-	39	2
g. Total (sum of a to f)	0300	321	-	316	5
h. FTE distribution, by function[b]	0390	148	-	144	4

Item 4. Part-time scientists and engineers, by field in which primarily employed and highest earned degree, January 1971.

FIELD OF EMPLOYMENT		TOTAL[a] (1)	PH.D. OR SC.D. (2)	M.D., D.D.S., ETC. (3)	MASTER'S (4)	BACHELOR'S OR THE EQUIVALENT (5)
a. Engineers	0410	34	4	-	17	13
b. Physical scientists	0420	141	90	-	13	38
c. Mathematicians	0430	31	7	-	8	16
d. Life scientists	0440	24	11	5	4	5
e. Psychologists	0450	37	27	-	9	1
f. Social scientists	0460	54	25	1	15	13
g. Total (sum of a to f)	0400	321	166	6	66	83

[a]Totals in items 3a to 3g, column 1, *should be the same* as the corresponding totals in items 4a to 4g, column 1.
[b]The totals in item 3h converting FTE's on part-time employment into FTE's will necessarily differ from head-count totals in item 3g.

SECTION B. NUMBER OF GRADUATE STUDENTS ENGAGED PART TIME AS SCIENTISTS AND ENGINEERS

Item 5. Graduate students receiving compensation for part-time services as scientists and engineers at your institution, by field and function in which primarily engaged; and total FTE's, by function, January 1971.

FIELD OF EMPLOYMENT		TOTAL (1)	TEACHING (2)	R & D (3)	OTHER ACTIVITIES (4)
a. Engineers (total)	0510	87	-	85	2
(1) Aeronautical engineers	0511	6	-	5	1

(1) Economists	0561	5	-	5	-
(2) Sociologists	0562	4	-	4	-
(3) Political scientists	0563	4	-	4	-
(4) Historians	0564	-	-	-	-
(5) Other social scientists	0565	115	-	115	-
g. Total *(sum of a to f)*	0500	822	-	818	4
h. FTE distribution, by function*	0590	460	-	458	2

*The totals in item 5h converting figures on part-time services into FTE's will necessarily differ from head-count totals in item 5g.

SECTION C. NUMBER OF TECHNICIANS EMPLOYED IN THE SCIENCES AND ENGINEERING

Item 6. Technicians, by field and function in which primarily employed, January 1971

					OTHER

(6) Other engineers	0516	46	-	45	1
b. Physical scientists (total)	0520	496	-	494	2
(1) Chemists	0521	183	-	182	1
(2) Earth scientists	0522	3	-	3	-
(3) Physicists	0523	197	-	197	-
(4) Other physical scientists	0524	113	-	112	1
c. Mathematicians (total)	0530	36	-	36	-
d. Life scientists (total)	0540	31	-	31	-
(1) Agricultural scientists	0541	-	-	-	-
(2) Biological scientists	0542	31	-	31	-
(3) Medical scientists	0543	-	-	-	-
e. Psychologists (total)	0550	44	-	44	-
f. Social scientists (total)	0560	128	-	128	-
(1) Economists	0561	5	-	5	-
(2) Sociologists	0562	4	-	4	-
(3) Political scientists	0563	4	-	4	-
(4) Historians	0564	-	-	-	-
(5) Other social scientists	0565	115	-	115	-
g. Total *(sum of a to f)*	0500	822	-	818	4
h. FTE distribution, by function*	0590	460	-	458	2

*The totals in item 5h converting figures on part-time services into FTE's will necessarily differ from head-count totals in item 5g.

SECTION C. NUMBER OF TECHNICIANS EMPLOYED IN THE SCIENCES AND ENGINEERING

Item 6. **Technicians, by field and function in which primarily employed, January 1971**

FIELD OF EMPLOYMENT		TOTAL (1)	R & D (2)	OTHER ACTIVITIES (3)
a. Engineering technicians	0610	6,232	5,836	396
b. Physical science technicians	0620	1,417	1,332	85
c. Biological science technicians (include agricultural)	0630	273	272	1
d. Medical and health-related technicians	0640	280	280	-
e. Social science technicians	0650	36	36	-
f. Total *(sum of a to e)*	0600	8,238	7,756	482

PART II—FINANCIAL DATA

(Includes items 7 to 13 of the survey questionnaire)

FINANCIAL DATA REPORTED IN PART II ARE FOR THE FISCAL YEAR, WHICH BEGAN ON JULY 1, 1969 AND ENDED ON JUNE 30, 1970, OR YOUR INSTITUTION'S EQUIVALENT FISCAL YEAR. SPECIFY THE ENDING DATE IF DIFFERENT FROM ABOVE:

_____

ALL FINANCIAL DATA REQUESTED ON THIS FORM SHOULD BE REPORTED IN THOUSANDS OF DOLLARS; FOR EXAMPLE, AN EXPENDITURE OF $25,342 SHOULD BE ROUNDED TO THE NEAREST THOUSAND DOLLARS AND REPORTED IN THE APPROPRIATE COLUMNS AS $25.

SECTION D

CURRENT EXPENDITURES FOR SEPARATELY BUDGETED RESEARCH AND DEVELOPMENT (R&D)

If your institution did not have any current expenditures for separately budgeted research and development in 1969-70 check "none" in the space provided here and skip to Section E. ☐ None.

(Exclude expenditures for capital equipment and facilities.)

Item 7. Current expenditures for separately budgeted research and development, by source of funds, 1969-70

SOURCE OF FUNDS		THOUSANDS OF DOLLARS	INTERNAL USE ONLY
a. Federal Government	0710	$ 734,131	equals 8d and 9d (Col. 2)
b. State government	0720	310	
c. Local government	0730	-	
d. Foundations	0740	281	
e. Voluntary health agencies	0750	1	
f. Industry	0760	121	
g. Institution's own funds	0770	1,706	
h. Other sources	0780	297	
i. Total *(sum of a to h)**	0700	$ 736,847	equals 8d and 9d (Col. 1)

Item 8. Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1969-70.

COST ITEM		THOUSANDS OF DOLLARS	
		TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	0810	$ 350,640	$ 349,443
b. All other direct costs (including materials and supplies)	0820	269,332	268,829
c. Indirect costs reimbursed or reimbursable	0830	116,875	115,859
d. Total *(sum of a to c)**	0800	$ 736,847	$ 734,131

Item 9. Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1969-70.

a. Federal Government	0710	$	734,131	equals 8d and 9d (Col. 2)
b. State government	0720		310	
c. Local government	0730		-	
d. Foundations	0740		281	
e. Voluntary health agencies	0750		1	
f. Industry	0760		121	
g. Institution's own funds	0770		1,706	
h. Other sources	0780		297	
i. Total (sum of a to h)*	0700	$	736,847	equals 8d and 9d (Col. 1)

Item 8. **Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1969-70.**

COST ITEM		THOUSANDS OF DOLLARS	
		TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	0810	$ 350,640	$ 349,443
b. All other direct costs (including materials and supplies)	0820	269,332	268,829
c. Indirect costs reimbursed or reimbursable	0830	116,875	115,859
d. Total (sum of a to c)*	0800	$ 736,847	$ 734,131

Item 9. **Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1969-70.**

TYPE OF R&D ACTIVITY		THOUSANDS OF DOLLARS	
		TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Basic research	0910	$ 268,732	$ 267,084
b. Applied research	0920	215,587	214,925
c. Development	0930	252,528	252,122
d. Total (sum of a to c)*	0900	$ 736,847	$ 734,131

*Totals in items 7i, 8d (Col. 1) and 9d (Col. 1) should be identical. Similarly, figures reported in items 7a, 8d (Col. 2) and 9d (Col. 2) should be identical. If figures for the foregoing items are not consistent, please give reasons in "Remarks" at the end of the questionnaire.

Item 10. Total and federally financed current expenditures for separately budgeted basic and applied research, by field of science, 1969-70

FIELD OF SCIENCE		THOUSANDS OF DOLLARS: TOTAL (1)	THOUSANDS OF DOLLARS: FEDERAL GOVERNMENT (2)
a. Engineering (total)	1010	$ 65,852	$ 65,702
b. Physical sciences (total)	1020	$ 337,607	$ 337,443
(1) Astronomy	1021	15,584	15,584
(2) Chemistry	1022	56,162	56,157
(3) Physics	1023	250,373	250,214
(4) Physical sciences, NEC	1024	15,488	15,488
c. Environmental sciences (total)	1030	$ 18,131	$ 18,099
d. Mathematics (total)	1040	$ 15,763	$ 15,140
e. Life sciences (total)	1050	$ 27,459	$ 27,304
(1) Biological	1051	21,536	21,526
(2) Clinical medical	1052	5,426	5,281
(3) Life sciences, NEC	1053	497	497
f. Psychology (total)	1060	$ 976	$ 956
(1) Biological aspects	1061	-	-
(2) Social aspects	1062	375	355
(3) Psychological sciences, NEC	1063	601	601
g. Social sciences (total)	1070	$ 5,059	$ 4,258
(1) Economics	1071	20	20
(2) Political science	1072	220	201
(3) Sociology	1073	102	91
(4) Social sciences, NEC	1074	4,717	3,946
h. Other sciences, NEC (total)	1080	$ 13,472	$ 13,107
i. Total (sum of a to h)*	1090	$ 484,319	$ 482,009

* If your institution has development funds please do not distribute them by field of science. Totals in 10i (columns 1 and 2) should be identical with the sums of lines 9a and 9b (columns 1 and 2).

SECTION E
CURRENT EXPENDITURES FOR INSTRUCTION AND DEPARTMENTAL RESEARCH IN THE SCIENCES AND ENGINEERING

Item 11. Current expenditures for instruction and departmental research in the sciences and engineering, by field of science, 1969-70

FIELD OF SCIENCE		TOTAL INSTRUCTION AND DEPARTMENTAL RESEARCH (THOUSANDS OF DOLLARS)	INTERNAL USE ONLY
a. Engineering	1110	$ -	
b. Physical and environmental sciences	1120	-	
c. Mathematics	1130		

c. Environmental sciences (total)	1030	$ 18,131	$ 18,099
d. Mathematics (total)	1040	$ 15,763	$ 15,140
e. Life sciences (total)	1050	$ 27,459	$ 27,304
(1) Biological	1051	21,536	21,526
(2) Clinical medical	1052	5,426	5,281
(3) Life sciences, NEC	1053	497	497
f. Psychology (total)	1060	$ 976	$ 956
(1) Biological aspects	1061	-	-
(2) Social aspects	1062	375	355
(3) Psychological sciences, NEC	1063	601	601
g. Social sciences (total)	1070	$ 5,059	$ 4,258
(1) Economics	1071	20	20
(2) Political science	1072	220	201
(3) Sociology	1073	102	91
(4) Social sciences, NEC	1074	4,737	3,946
h. Other sciences, NEC (total)	1080	$ 13,472	$ 13,107
i. Total (sum of a to h)*	1000	$ 484,319	$ 482,009

* If your institution has development funds please do not distribute them by field of science. Totals in 10i (columns 1 and 2) should be identical with the sum of lines 9a and 9b (columns 1 and 2).

SECTION E

CURRENT EXPENDITURES FOR INSTRUCTION AND DEPARTMENTAL RESEARCH IN THE SCIENCES AND ENGINEERING

Item 11. Current expenditures for instruction and departmental research in the sciences and engineering, by field of science, 1969-70

FIELD OF SCIENCE		TOTAL INSTRUCTION AND DEPARTMENTAL RESEARCH (THOUSANDS OF DOLLARS)	INTERNAL USE ONLY
a. Engineering	1110	$ -	
b. Physical and environmental sciences	1120	-	
c. Mathematics	1130	-

e. Psychology	1150	-	
f. Social sciences	1160	-	
g. Other sciences, NEC	1170	-	
h. Total (sum of a to g)	1100	$ -	

Item 12. Estimate the dollar amount of overhead or indirect costs allocable to the instruction and departmental research activities reported above (item 11)

1200 — THOUSANDS OF DOLLARS: $

SECTION F
CAPITAL EXPENDITURES FOR SCIENTIFIC AND ENGINEERING FACILITIES AND EQUIPMENT FOR RESEARCH, DEVELOPMENT, AND INSTRUCTION

Item 13. **Capital expenditures for scientific and engineering facilities and equipment for research, development, and instruction, by field of science, source of funds, and purpose, 1969-70.**

Prorate any expenditures intended for use in two or more fields of science and for R&D and graduate and undergraduate instruction. Do not include any materials and supplies reported under current expenditures in Section D or Section E. Include current fund expenditures for equipment and facilities as well as plant and other funds.

FIELD OF SCIENCE		SOURCE OF FUNDS (THOUSANDS OF DOLLARS)			
		TOTAL (1)	FEDERAL GOVERNMENT (2)	STATE AND LOCAL GOVERNMENT (3)	OTHER SOURCES (4)
13.1 All purposes (total)

NAME OF PERSON SUBMITTING THIS FORM	TITLE
NAME OF INSTITUTION	ADDRESS *(number, street, city, state, ZIP code)*
AREA CODE, TELEPHONE NO., EXT. / DATE	

Appendix E

Reproduction of Covering Letter and Instructions[1]

[1] The questionnaires used in the survey are reproduced in appendixes B, C, and D. NSF Form 411 in appendix C was used to obtain data for the university or college as a whole, while NSF Form 412 was used to obtain separate data for medical schools and university-administered FFRDC's, respectively.

NATIONAL SCIENCE FOUNDATION
WASHINGTON, D.C. 20550

November 25, 1970

Dear Sir:

The National Science Foundation requests your assistance in its Survey of Scientific Activities of Institutions of Higher Education, 1971. The enclosed questionnaire seeks information on the employment of scientific and engineering personnel in January 1971 and the financing of scientific and engineering activities at your institution during academic year 1969-70. Please return the completed questionnaire in the enclosed self-addressed envelope in January 1971, or as soon thereafter as possible.

As you may know, this survey of universities and colleges is conducted biennially as an integral part of NSF's program of periodic surveys and studies designed to gather factual information on the allocation of scientific and engineering resources in industry, the Federal Government, universities and colleges, and other nonprofit institutions. The results of such studies are used by the National Science Foundation and other public and private organizations in the formulation of policies and programs to strengthen science and technology throughout the national economy.

Enclosed also is a self-addressed postcard requesting the name and title of the official assigned to complete the questionnaire for your institution. Your prompt return of this postcard to the National Science Foundation will insure that any inquiries regarding your institution's participation in the survey will be directed to the appropriate official. If any questions arise regarding the interpretation of the survey questionnaire, please write or call Dr. Joseph H. Schuster (Area Code 202, 632-4080) at the Foundation's Office of Economic and Manpower Studies.

The Foundation is grateful for your past cooperation and will appreciate your participation in this survey.

Sincerely yours,

Charles E. Falk
Director, Division of Science
Resources and Policy Studies

Enclosures

NATIONAL SCIENCE FOUNDATION
Washington, D.C. 20550

INSTRUCTIONS FOR SURVEY OF SCIENTIFIC ACTIVITIES OF INSTITUTIONS OF HIGHER EDUCATION, 1971

OUTLINE OF INSTRUCTIONS

GENERAL

Page

Period Covered by the Report 3
Reporting Units 3

PART I. PERSONNEL DATA

Section A. Number of Scientists and Engineers (Items 1 to 4) 4

Section B. Number of Graduate Students Engaged Part Time as Scientists and Engineers (Item 5) 6

Section C. Number of Technicians Employed in the Sciences and Engineering (Item 6) 6

PART II. FINANCIAL DATA

Section D. Current Expenditures for Separately Budgeted Research and Development (Items 7 to 10) 7

Section E. Current Expenditures for Instruction and Departmental Research in the Sciences and Engineering (Items 11 and 12) 10

Section F. Capital Expenditures for Scientific and Engineering Facilities and Equipment for Research, Development, and Instruction (Item 13) 10

GENERAL

The National Science Foundation requests your cooperation in completing the attached questionnaire covering the personnel and financial characteristics of your institution as they relate to the sciences and engineering.

The purpose of this survey is to obtain statistical data on the resources devoted to scientific activities at institutions of higher education. This information will assist the National Science Foundation to fulfill its responsibilities in supporting basic research and education in the sciences and in the formulation of recommendations on national science policy in keeping with the National Science Foundation Acts of 1950 and 1968.

Each institution included in this survey is requested to supply data on the number of scientific and technical personnel engaged in scientific and engineering activities; the total current expenditures for separately budgeted (i.e., organized) research and development (R&D); current expenditures for instruction and departmental research in the sciences and engineering; and capital expenditures for scientific and engineering facilities and equipment for research, development, and instruction. Because information on some items may not be available from records normally maintained by your institution, reasonable estimates for such items will be satisfactory. Enter "0" as a total, rather than leave an item blank.

This survey is generally comparable to that conducted by this office in 1969, covering expenditures for the academic year 1967-68 and manpower as of mid-January 1969. Where data reported in this survey differ significantly from those reported in the previous survey, please attach a short note in the space provided for "remarks" indicating the reasons for the difference, such as "opening of new medical school," etc.

If you have any questions regarding information requested on this form, write to Universities and Nonprofit Institutions Studies Group, National Science Foundation, Washington, D.C., 20550. Additional forms may be obtained by writing to the above address.

PERIOD COVERED BY THE REPORT

Personnel data (Part I) are to be reported as of mid-January 1971, or as close thereto as possible.

The time period covered in the financial sections of the form (Part II) is the fiscal year which began on July 1, 1969, and ended on June 30, 1970, or your institution's equivalent fiscal year ending in 1970.

REPORTING UNITS

This survey covers research, development, and other scientific activities of all branches and other units of the parent institution, both on and off the main campus, in the United States and its outlying areas.

Every institution should complete a white form (NSF Form 411) presenting aggregate data for the entire institution, exclusive of university-administered Federally Funded Research and Development Centers (FFRDC's). Institutions administering FFRDC's should exclude FFRDC data from Form 411. Medical school data, however, should be *included* on Form 411. If data are requested for one or more units of an institution, blue forms (NSF Form 412) will be attached with the names of the units concerned entered on them. The blue form should be completed for only that part of the institution which is specified on the form. If your institution has not received forms for all such units, as described in the instructions below, additional forms will be supplied upon request.

For purposes of this survey, the various organizational units of colleges and universities for which a blue questionnaire (NSF Form 412) is requested are defined as follows:

Federally Funded Research and Development Centers, as designated by Federal agencies, are R&D organizations exclusively or substantially financed by the Government, and administered on a contractual basis by educational institutions or other organizations.

Medical Schools are those two- or four-year schools of medicine approved by the Council on Medical Education and Hospitals and the Association of American Medical Colleges. Included are hospitals or clinics owned, operated, or controlled by universities and integrated operationally with the clinical programs of their medical schools. Also included are research bureaus or institutes which are integral parts of medical schools. In addition, include those research bureaus and institutes which are nonuniversity owned but are affiliated with the medical school and any university bureaus and institutes which may be outside the departmental structure of universities but whose senior research staff members hold teaching appointments with medical schools.

Alternative Reporting Procedure—Although NSF Form 411 is intended to be used to report data for the institute as a whole, it is recognized that some institutions may find it convenient to submit separate reports for branches or other organizational units. If your institution prefers to submit separate reports for branches or other organizational units rather than a single report covering the entire institution, list in the space provided on the first page of NSF Form 411 all branches or other organizational units of your institution which have been excluded from NSF Form 411 and for which separate reports are being submitted. This procedure may be used in the case of separate organizational units for which separate data have been provided on NSF Form 412.

NOTE: Separate data on the scientific activities of agricultural experiment stations, agricultural extension services and affiliated colleges of agriculture *are not requested* in this survey. However, data for these organizational units should be included in the report for the institution as a whole.

PART I–PERSONNEL DATA

(Includes items 1 to 6 of the survey questionnaire)

The survey requests data on the number of professional and technical personnel employed or engaged in science and engineering activities in all branches and other organizational units of your institution, whether on or off the main campus, in the United States or in its outlying areas. Include all such personnel who were paid a salary or stipend and members of religious orders who received no remuneration while employed at the institution. Exclude personnel on sabbatical or other leave status and personnel employed in branches of your institution located in foreign countries. Also exclude voluntary workers, such as voluntary staff members at medical and dental schools.

Report data for scientific and technical personnel employed as of mid-January 1971, or as close to that date as possible.

Categories of scientific and engineering personnel for whom the survey requests separate data are as follows: Full-time and part-time scientists and engineers (Section A), graduate students engaged part time as scientists and engineers (Section B), and technicians employed in the sciences and engineering (Section C). Additional information regarding procedures to be used in reporting personnel data is included in instructions relating to individual Sections or items.

The following instructions relate to the reporting of scientists and engineers by those institutions with separate administrative units (FFRDC's and medical schools) for which NSF Form 412 (blue questionnaire) will be prepared.

A. For *Federally Funded Research and Development Centers* include data for scientists and engineers holding appointments at the center. Personnel holding joint appointments in more than one organizational unit including a center are to be reported for the center only if they held their principal appointments with the center.

B. For *medical schools* include as scientists only those physicians, dentists, public health specialists, pharmacists, etc., who spend the greatest proportion of their time in teaching, clinical investigation, or other R&D activities. Exclude all medical practitioners who spend the greatest proportion of their time providing patient care, dispensing drugs or services, or in diagnosis, etc. Exclude unpaid voluntary staff. Include scientists employed by hospitals or clinics owned, operated, or controlled by the university and integrated operationally with the clinical programs of the medical school. Include residents employed in such hospitals or clinics, but *exclude interns*. Student health services are not to be included in the form for the medical school.

Classification of Fields of Employment

Listed below are the broad and detailed fields of employment with additional explanation of coverage, which are to be used in classifying scientists and engineers included in Part I, items 1 through 6. Please classify persons employed in interdisciplinary or multidisciplinary specializations in the listed fields with which their activities (teaching, research, or other) are most closely identified. For example, a scientist employed in general categories such as science education should be classified into the discipline most closely related to the academic requirements of his position, such as mathematics, sociology, or psychology.

Engineers:
- Aeronautical
- Chemical (includes ceramic)
- Civil (includes architectural, structural, sanitary)
- Electrical (includes electronic)
- Mechanical
- Other (includes agricultural, industrial, mining and metallurgical, nuclear, textile)

Physical scientists:
- Chemists
- Earth scientists (includes geologists, geophysicists, meteorologists, oceanographers, physical geographers)
- Physicists
- Other physical scientists (includes astronomers, metallurgists)

Mathematicians (includes statisticians and computer scientists)

Life scientists:

- Agricultural scientists (includes agronomists, foresters, husbandrymen, horticulturists, soil scientists)
- Biological scientists (includes anatomists, bacteriologists, botanists, geneticists, microbiologists, pathologists, pharmacologists, physiologists, zoologists)
- Medical scientists (includes all branches of medical, dental, veterinary medicine and other clinical fields)

Psychologists: (includes clinical, social, educational, industrial and personnel, counseling and guidance, and experimental psychologists)

Social scientists:

- Economists (includes agricultural economists, econometricians)
- Sociologists
- Political scientists
- Historians
- Other social scientists (includes anthropologists, archeologists, demographers, social and economic geographers)

Section A—Number of Scientists and Engineers

(Exclusive of graduate students)

(Note: Figures on graduate students engaged part time as scientists and engineers should be reported in Section B)

This section requests data on full-time and part-time scientists and engineers employed or engaged in teaching, research and development, or other activities. The reporting institution is requested to use its own definition of what constitutes a full-time appointment.

Scientists and engineers include salaried personnel of your institution who have received a bachelor's degree or higher or, if foreign educated, academic training equal to a bachelor's degree or higher, and who are working at a professional level (a level at which the knowledge acquired by such academic training is essential in the performance of duties) in the sciences or engineering.

Item 1. Full-time scientists and engineers, by field and function in which *primarily* employed, and total full-time equivalents, by function, January 1971.

In items 1a to 1g, the functional classification of professional personnel into teaching (column 2), R&D (column 3) and other activities (column 4), should be based on the function in which the person is primarily engaged or employed at the institution. For example, a person engaged in two or all three of the specified functional categories should be classified in the function in which he spends the largest proportion of his time. In classifying personnel by function, take into account only activities carried out under the auspices or the official encouragement of your institution. Exclude outside consulting work and teaching not performed under the auspices of your institution.

In classifying an individual under a particular category (teaching, research and development, or other activities), take into consideration all official activities even if carried on in a school or department other than the one in which he holds his principal appointment.

Teaching (column 2) is defined as encompassing those activities connected with degree credit courses or which are intended to lead ultimately to the granting of degrees or certificates or to professional certification or licensing. Included are such functions as instruction and training performed in connection with degree credit courses and the administration of such instruction and training. Also include instruction of interns, residents, and other professional personnel receiving advanced training such as postdoctoral fellows or trainees.

Time spent by faculty or other staff members in supervising the thesis work of graduate students is considered to be part of the teaching function.

Research and development include basic and applied research in the sciences and in engineering, and design and development of prototypes and processes (column 3). Included in this function is the preparation for publication of books and papers describing the results of the specific research and development, if carried out as an integral part of that research and development. Also included is the administration of research and development.

Under *other activities* (column 4) report all professional personnel not primarily employed in teaching or research and development, as defined above. Examples of such activities are agri-

cultural demonstration work; adult education (if not degree credit); dissemination of scientific information; and student health services. Include as scientists only those physicians, dentists, public health specialists, pharmacists, etc., who spend the greatest proportion of their time in teaching, clinical investigation, or other R&D activities. Exclude all medical practitioners who spend the greatest proportion of their time providing patient care, dispensing drugs or services, or in diagnosis, etc.

In item 1h, classify personnel reported in item 1g in each of the three functions on a full-time-equivalent basis. Apportion time of staff members among the three functions on the basis of the proportion of effort or time spent in each of the functions. For example, 24 individuals devoting three-fourths time to teaching and one-fourth to research and development should be reported as 18 in teaching and 6 in research and development. *Calculate full-time equivalents to the nearest whole number.* In item 1h, figures in columns 2, 3, and 4 should add to the total in column 1.

Item 2. Full-time scientists and engineers, by field in which *primarily* employed and highest earned degree, January 1971.

Report scientists and engineers in the field in which they are primarily employed by the institution. Personnel engaged in administration or community service should be classified in the field most closely related to their present employment at the institution.

For the purposes of this survey, earned degrees are classified in four categories as defined below:

a. Ph.D. or Sc.D. degrees include all such earned degrees. Individuals holding *both* the Ph.D. (or Sc.D.) degree and a first-professional degree, such as the M.D., should be included in column 2.

b. Include individuals whose highest earned degrees are first-professional medical degrees that indicate the completion of the academic requirements based on programs that require at least two academic years of previous college work for entrance and require a total of at least six academic years of college work for completion. Specifically, include in column 3 first-professional degrees in Medicine (M.D.), Dentistry (D.D.S. or D.M.D.), Veterinary Medicine (D.V.M.), Chiropody or Podiatry (D.S.C. or D.P.), Optometry (O.D.), and Osteopathy (D.O.). Individuals holding *both* the Ph.D. (or Sc.D.) degree and a first-professional degree, such as the M.D., should be included in column 2 as mentioned in (a) above.

c. Master's degrees include all second-level degrees above the bachelor's degree and below the Ph.D. or Sc.D. and M.D., D.D.S., and other first-professional degrees (column 4).

d. Report all individuals whose highest earned degree is the bachelor's degree or a four- or five-year first-professional degree, or who have the equivalent in experience, even if they have not earned such a degree (column 5).

Item 3. Part-time scientists and engineers, by field and function in which primarily employed; and total full-time equivalents, by function, January 1971.

Instructions for item 1 relating to classification by field and function also relate to part-time professional staff in item 3.

In estimating the full-time equivalents of part-time personnel in item 3h, use your institution's definition of such equivalents. Thus, four part-time instructors, each of whom teaches one 3-hour credit course, may be reported as one full-time equivalent in teaching, if four such credit courses were considered the load of a full-time instructor at your institution. *Calculate full-time equivalents to the nearest whole number.*

Item 4. Part-time scientists and engineers, by field in which primarily employed and highest earned degree, January 1971.

The reporting institution is requested to use its own definition of what constitutes part-time employment. Instructions for item 2 relating to classification by field and highest earned degree also relate to part-time professional staff in item 4.

Section B—Number of Graduate Students Engaged Part Time as Scientists and Engineers

Item 5. Graduate students receiving compensation for part-time services as scientists and engineers at your institution, by field and function in which primarily engaged; and total full-time equivalents, by function, January 1971.

Include all graduate students who devote part of their time to a course of study designed to lead to an advanced degree in the sciences or engineering and who also receive compensation from your institution for part-time professional services performed in the sciences or engineering. This category includes (a) graduate students receiving salaries or wages for their services as teaching or research assistants and (b) graduate students receiving duty stipends, such as scholarships, fellowships, or traineeships, that require the performance of professional services in the sciences or engineering at your institution. Exclude graduate students receiving nonduty stipends and others who may be engaged in scientific and engineering activities on a voluntary basis.

Instructions in item 1 regarding classification by field and function may be used in classifying graduate students reported in item 5.

Section C—Number of Technicians Employed in the Sciences and Engineering

Item 6. T[illegible]icians, by field and function in which primarily employed, January 1971.

Technicians include all persons employed in positions which involve technical work at a level requiring knowledge of engineering, mathematics, physical science, life science, psychology, or social science comparable to that acquired through formal post high school training (less than a bachelor's degree), such as that obtained at technical institutes and junior colleges or through equivalent on-the-job training or experience. All personnel performing the duties described above should be reported as technicians even if they hold a bachelor's or higher degree. Some typical job titles include laboratory technician or assistant, physical science aide, engineering aide, statistical aide, draftsman, and computer programmer.

Do not include graduate students who were reported in item 5. Also exclude craftsmen such as electricians, carpenters, machinists, etc. In the case where undergraduate students, juniors or seniors, are employed in R&D activities, they may, where applicable, be included as technicians.

PART II—FINANCIAL DATA

(Includes items 7 to 13 of the survey questionnaire)

Section D—Current Expenditures for Separately Budgeted Research and Development (R&D)

(Expenditures for capital equipment and facilities are to be excluded here but reported in Section F.)

In general, financial data requested in this survey are intended to be consistent with principles of financial accounting for institutions of higher education presented in *College and University Business Administration* (Washington, D.C.: American Council on Education, 1968). Similarly, data in this survey are related to financial data reported in U.S. Office of Education's Higher Education General Information Survey, "Financial Statistics of Institutions of Higher Education." It should be noted, however, that there are a few terminological and other differences between the present survey and the Office of Education survey cited above. For example, the present survey uses the term, "Research and Development," to denote the entire spectrum of separately budgeted R&D activities, as defined above, whereas the Office of Education survey uses the term, "Organized Research."

All financial data requested on this form should be reported in thousands of dollars; for example, an expenditure of $25,342 should be rounded to the nearest thousand dollars and reported in the appropriate columns as 25.

DEFINITION OF RESEARCH AND DEVELOPMENT (R&D)

Research and development include basic and applied research in the sciences and in engineering, and design and development of prototypes and processes.

Research is a systematic, intensive, study directed toward fuller knowledge of the subject studied. Research may be either basic or applied.

Basic research is directed toward an increase of knowledge; it is research where the primary aim of the investigator is a fuller knowledge or understanding of the subject under study rather than a practical application thereof.

Applied research is directed toward the practical application of knowledge. The definition of applied research differs from the definition of basic research chiefly in terms of the objectives of the investigator.

Development is the systematic use of knowledge directed toward the design and production of useful prototypes, materials, devices, systems, methods, or processes. It does not include quality control or routine product testing.

Classification of Fields of Science

Listed below are illustrative disciplines included in engineering and the various fields of science for which separate data are requested in items 10, 11, and 13 of Part II of the questionnaire. *Classification of Fields of Employment* which is to be used in classifying scientists and engineers included in Part I, items 1 through 6 is shown on pages 3 and 4.

ENGINEERING	
AERONAUTICAL	Aircraft, missiles
ASTRONAUTICAL	Aerospace, space technology
CHEMICAL	Petroleum, petroleum refining, process
CIVIL	Architectural, hydraulic, hydrologic, marine, sanitary and environmental, structural, transportation
ELECTRICAL	Communications, electronics, power
MECHANICAL	Engineering mechanics
METALLURGY AND MATERIALS	Ceramic, mining, textile, welding
ENGINEERING, NEC	Agricultural, industrial and management, nuclear, ocean engineering, systems
PHYSICAL SCIENCES	
ASTRONOMY	Laboratory astrophysics, optical astronomy, radio astronomy, theoretical astrophysics, x-ray, gamma-ray, neutrino astronomy
CHEMISTRY	Inorganic, organometallic, organic, physical

PHYSICS	Acoustics, atomic and molecular, condensed matter, elementary particles, nuclear structure, optics, plasma
ENVIRONMENTAL SCIENCES (Terrestrial and Extra-terrestrial)	
ATMOSPHERIC SCIENCES	Astronomy, solar, weather modification, extra-terrestrial atmospheres, meteorology
GEOLOGICAL SCIENCES	Engineering geophysics, general geology, geodesy and gravity, geomagnetism, hydrology, inorganic geochemistry, isotopic geochemistry, organic geochemistry, lab geophysics, paleomagnetism, paleontology, physical geography and cartography, seismology, soil [illegible]
OCEANOGRAPHY	Chemical oceanography, geological oceanography, physical oceanography, marine geophysics
MATHEMATICS	Algebra, analysis, applied mathematics, computer science, foundations and logic, geometry, numerical analysis, statistics, topology
LIFE SCIENCES	
BIOLOGICAL	Anatomy, animal sciences, bacteriology, biochemistry, biogeography, biological oceanography, biophysics, ecology, embryology, entomology, evolutionary biology, genetics, immunology, microbiology, nutrition and metabolism, parasitology, pathology, pharmacology, physical anthropology, physiology, plant sciences, radiobiology, systematics
CLINICAL MEDICAL	Internal medicine, neurology, ophthalmology, preventive medicine and public health, psychiatry, radiology, surgery, veterinary medicine, dentistry, physical medicine and rehabilitation, pharmacy, podiatry
PSYCHOLOGY	
BIOLOGICAL ASPECTS	Experimental psychology, animal behavior, clinical psychology, comparative psychology, ethology
SOCIAL ASPECTS	Social psychology; educational, personnel, vocational psychology and testing; industrial and engineering psychology; development and personality
SOCIAL SCIENCES	
ECONOMICS	Econometrics and economic statistics; history of economic thought; international economics; industrial, labor and agricultural economics; macroeconomics; microeconomics; public finance and fiscal policy; theory; economic systems and development
POLITICAL SCIENCE	Area or regional studies, comparative government, history of political ideas, international relations and law, national, political and legal systems; political theory, public administration
SOCIOLOGY	Comparative and historical, complex organizations, culture and social structure, demography, group interactions, social problems and social welfare, sociological theory
SOCIAL SCIENCES, NEC	Anthropology, history, linguistics, socio-economic geography, and research in education
OTHER SCIENCES, NEC	To be used only when multidisciplinary and interdisciplinary aspects make it impossible to classify the project or employment under one primary field

Item 7. Current expenditures for separately budgeted research and development, by source of funds, 1969-70.

Source of funds refers to immediate sources rather than ultimate sources of funds concerned. For example, funds received by your institution from a foundation should be reported under that source, even if industry was the original source of some or all of the foundation's funds.

Under *Federal Government* (item 7a) include grants and contracts earmarked for research and development by all agencies of the Federal Government. In reporting Federal funds [illegible] *institution to be performed by other organizations.*

Under *State government* (item 7b) include funds designated for R&D by the State government and its agencies.

Under *Local government* (item 7c) include funds designated for R&D by county, municipal, or other local governments and their agencies.

Under *Foundations* (item 7d) include grants and contracts earmarked for R&D by nonprofit philanthropic foundations and trusts not affiliated with your institution, such as the Carnegie, Ford, Kresge, or Rockefeller Foundations.

	immunology, microbiology, nutrition and metabolism, parasitology, pathology, pharmacology, physical anthropology, physiology, plant sciences, radiobiology, systematics
CLINICAL MEDICAL	Internal medicine, neurology, ophthalmology, preventive medicine and public health, psychiatry, radiology, surgery, veterinary medicine, dentistry, physical medicine and rehabilitation, pharmacy, podiatry
PSYCHOLOGY	
BIOLOGICAL ASPECTS	Experimental psychology, animal behavior, clinical psychology, comparative psychology, ethology
SOCIAL ASPECTS	Social psychology, educational, personnel, vocational psychology and testing, industrial and engineering psychology, development and personality
SOCIAL SCIENCES	
ECONOMICS	Econometrics and economic statistics, history of economic thought, international economics, industrial, labor and agricultural economics, macroeconomics, microeconomics, public finance and fiscal policy, theory, economic systems and development
POLITICAL SCIENCE	Area or regional studies, comparative government, history of political ideas, international relations and law, national, political and legal systems, political theory, public administration
SOCIOLOGY	Comparative and historical, complex organizations, culture and social structure, demography, group interactions, social problems and social welfare, sociological theory
SOCIAL SCIENCES, NEC	Anthropology, history, linguistics, socio-economic geography, and research in education
OTHER SCIENCES, NEC	To be used only when multidisciplinary and interdisciplinary aspects make it impossible to classify the project or employment under one primary field.

Item 7. Current expenditures for separately budgeted research and development, by source of funds, 1969-70.

Source of funds refers to immediate sources rather than ultimate sources of funds concerned. For example, funds received by your institution from a foundation should be reported under that source, even if industry was the original source of some or all of the foundation's funds.

Under *Federal Government* (item 7a) include grants and contracts earmarked for research and development by all agencies of the Federal Government. In reporting Federal funds for research and development, include those Federal funds channeled through State agencies. *Exclude R&D contracts subcontracted by your institution to be performed by other organizations.*

Under *State government* (item 7b) include funds designated for R&D by the State government and its agencies.

Under *Local government* (item 7c) include funds designated for R&D by county, municipal, or other local governments and their agencies.

Under *Foundations* (item 7d) include grants and contracts earmarked for R&D by nonprofit philanthropic foundations and trusts not affiliated with your institution, such as the Carnegie, Ford, Kresge, or Rockefeller Foundations. Funds from foundations which are affiliated with, or grant solely to, your institution, should be included under *Institution's own funds.*

Under *Voluntary health agencies* (item 7e) include grants and contracts specified for R&D by voluntary health agencies, such as the American Cancer Society and the American Heart Association. Funds specifically designated for R&D and derived from a health agency that is a unit of a State or local government should be reported under *State or local government*. Funds from professional societies such as the American Medical Association and the American Dental Association should be reported under *Other sources*.

Under *Industry* (including trade associations) (item 7f) include all grants and contracts allocated to R&D by profitmaking organizations, whether engaged in production, distribution, research, service, or other activities. Do not include grants and contracts from nonprofit foundations financed by industry, which should be reported under *Foundations*.

Under *Institution's own funds* (item 7g) include any funds which the institution was free to designate for R&D and which were in fact so budgeted. The sources of these funds may include endowment income; tuition and fees; general-purpose State or local government appropriations; and general-purpose grants from industry, foundations, health agencies or other outside sources, provided these were unrestricted funds and were utilized by your institution for separately budgeted R&D. Also include in item 7g all costs incurred in the performance of separately budgeted R&D projects carried out under Federal or non-Federal sponsorship that were defrayed by your institution out of its own funds, including costs defrayed in accordance with cost-sharing arrangements.

Under *Other sources* (item 7h) report any additional funds received from outside sources other than those already noted, and which were earmarked for R&D *by the source*. Examples include gifts, grants, or contracts received from private individuals or professional societies, and designated for R&D by them.

Item 8. Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1969-70.

The purpose of this question is to obtain a cost breakdown of the current expenditures associated with the performance of research and development at your institution. For each of the cost items for which separate data are requested, indicate the amount funded by the Federal Government (column 2). The total shown in 8d (column 1) should be the same as the totals in item 7i and item 9d (column 1). Similarly, the total shown for Federal Government in item 8d (column 2) should be the same as totals in item 7a and in item 9d (column 2).

In item 8a, report direct salaries and wages charged to separately budgeted R&D accounts of your institution. Include costs of benefits only where they can be directly attributed to the costs of separately budgeted research and development; otherwise, include such costs under item 8c, indirect costs reimbursed or reimbursable.

In item 8b, report all expenditures for materials and expendable equipment.

In item 8c, report all indirect (overhead) costs attributable to separately budgeted R&D expenditures which were reimbursed or will be reimbursed by the sponsoring organization. Do not include any indirect costs incurred which *were not* reimbursed and *will not* be reimbursed.

Item 9. Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1969-70.

Types of R&D activity for which separate data are requested (basic research, applied research, and development) are defined on page 7 of the Instructions. It is recognized that your records may not yield exact figures on amounts expended for each of the three categories. In such cases reasonable estimates of the breakdown will be satisfactory. The totals in item 9d should be the same as those in item 8d.

Item 10. Total and federally financed current expenditures for separately budgeted basic and applied research, by field of science, 1969-70.

In column 1, include all current expenditures for total separately budgeted research, by field of science as shown on pages 7 and 8, whether such expenditures derive from outside sources or your institution's own funds, and whether from contracts, grants, gifts, endowments (income or principal), State and local government appropriations, or other sources, provided the funds were separately budgeted for research and were expended in the fiscal year 1969-70. Also include any indirect costs reimbursed or reimbursable by outside sponsors of research projects. Where it is not possible to identify expenditures for the year, receipts may be substituted.

In column 2, classify total separately budgeted research financed by the Federal Government, by field of science.

Totals in item 10b (columns 1 and 2) should equal the sum of items 9a and 9b (columns 1 and 2).

Section E—Current Expenditures for Instruction and Departmental Research in the Sciences and Engineering

(Expenditures for capital equipment and facilities are to be excluded here but reported in Section F.)

Financial data requested in this section are intended to be consistent with data reported in U.S. Office of Education's Higher Education General Information Survey, *"Financial Statistics of Institutions of Higher Education."* Data requested should be derived from or estimated on the basis of Current-Funds Revenue (Revenue for Education and General Purposes) and Current-Funds Expenditures (Educational and General Expenditures).

Current expenditures for instruction and departmental research include the salaries of department heads, faculty members, secretaries and technicians, office and laboratory supplies, and other expenses. All expenditures incurred for instructional programs in science and engineering subjects for students pursuing degree-credit courses of study which lead generally to a certificate or degree should be included.

Item 11. Current expenditures for instruction and departmental research in the sciences and engineering, by field of science, 1969-70.

Report all current expenditures of the instructional departments, colleges, and schools of the institution in the sciences and engineering, by field of science, as described on pages 7 and 8.

Item 12. Estimate the dollar amount of overhead (or indirect) costs allocable to the instruction and departmental research activities reported above (item 11).

Current expenditures for instruction and departmental research in the sciences and engineering (item 11) represent *direct* expenditures incurred by your institution in carrying out these functions. The purpose of item 12 is to obtain an estimate of the overhead or indirect costs associated with these direct expenditures. Such overhead or indirect costs include an appropriate share of the institution's expenditures for general administration, student services, libraries, and the operation and maintenance of physical plant.

Section F—Capital Expenditures for Scientific and Engineering Facilities and Equipment for Research, Development, and Instruction

This section covers capital expenditures for scientific and engineering facilities and equipment for research, development, and instruction during 1969-70. Report funds expended during 1969-70 for facilities which were in process in that year and for facilities which were completed that year. Expenditures for administration buildings, steam plants, residence halls, and other such facilities should be excluded unless utilized principally for research, development, or instruction in engineering or in the sciences. Land costs should be excluded.

Facilities and equipment expenditures include the following: (a) fixed equipment such as built-in equipment and furnishings (hoods, fixed laboratory tables and benches, and ventilation equipment); (b) movable scientific equipment such as oscilloscopes, pulse-height analyzers, spectrometers, and plasma and protein separators; (c) movable furnishings such as bookcases, desks, file cabinets, tables, and simple tools; (d) architect's fees, site work, extension of utilities, and the building costs of service functions such as integral cafeterias and bookstores of a facility;

and (c) special separate facilities used to house scientific apparatus such as hypersonic tunnels, accelerators, and oceanographic vessels.

Current-fund expenditures for capital equipment and facilities should be reported in this section and should be excluded from Sections D and E. Expenditures from plant and other funds for facilities and equipment should likewise be included in this section.

Item 13. Capital expenditures for scientific and engineering facilities and equipment for research, development, and instruction, by field of science, source of funds, and purpose, 1969-70.

Capital expenditures should be divided into three sections: (1) all purposes, (2) R&D and graduate instruction, and (3) undergraduate instruction. Further, classify such expenditures by broad fields of science, as follows: engineering, physical and environmental, mathematics, life, psychology, social, and other sciences. See the instructions related to item 7 for assistance in distributing capital by source of funds.

Prorate capital expenditures for multipurpose structures. The space utilized for particular functions may be used as a guide in prorating. Thus, if 50 percent of the total square footage of a science building is allocated to R&D and graduate instruction, the remaining 50 percent to undergraduate instruction, then capital expenditures should be distributed accordingly between these two functions. The following guidelines may be helpful in determining the functional usage of space: (1) The term *research and development* (R&D) was previously defined on page 7 of the Instructions. *Graduate instruction* is a course of study offered primarily to students who have attained a first-level degree and is designed to lead to a second-level or doctoral degree in a given field. Included is postdoctoral education which is defined as advanced training beyond the Ph.D. or Sc.D. degree, as well as the training of interns and residents. (2) *Undergraduate instruction* is a course of study designed to lead to the bachelor's or first-professional degree in a given field.
